PROJECT COMPLETION CERTIFICATE

To Whom It May Concern,

Amreen Lalani
Roll No: 121423672065

28 Oct 2024

Greetings!
This is to certify that Ms. Amreen Lalani (Roll No: 121423672065), a student of St. Joseph's Degree and PG College, Hyderabad, has successfully completed her academic project entitled "A Study on Fundamental Analysis With reference To Tourism Industry" under the guidance of Mr. M Bhavan Kumar, Manager at 4R Investments Pvt. Ltd. The project commenced on 29th August 2024 and concluded on 28th October 2024, spanning a period of 60 days.

During her tenure with our organization, Ms. Amreen Lalani conducted an in-depth analysis of the stock fundamentals and financial performance In Tourism Industry. She exhibited a thorough understanding of financial research principles and analytical methodologies. Her dedication, diligence, and critical thinking skills were integral to the successful completion of the project.

We appreciate her meaningful contributions and wish her continued success in her academic and professional endeavors.

Authorized by:
M Bhavan Kumar
manager
4R Investments Pvt. Ltd.

Sincerely,

Bhavan Kumar

4R Investments

ST. JOSEPH'S
DEGREE & PG COLLEGE
Autonomous, Affiliated to Osmania University
Re-Accredited by NAAC with "B++" Grade with a CGPA of 2.86
A Catholic Christian Minority Institution (Co-Education)

CERTIFICATE

Date: ____________

This is to certify that the Project Report title________________________

____

submitted in partial fulfilment for the award of MBA Programme of the Department of Business Management, St. Joseph's Degree & PG College (Autonomous), Affiliated to Osmania University, Hyderabad, was carried out by ______________________________ under my guidance. This has not been submitted to any other University or Institution for the award of any degree/diploma/certificate.

ACKNOWLEDGEMENT

I take this opportunity to express my sincere gratitude to all those who have supported and guided me throughout the completion of this project. It is great for me to record here my deep sense of gratitude to **MR. M. Bhavan Kumar, 4R Investments Kachiguda,** for the guidance and constant supervision, as well as for providing necessary information regarding the project and also for supporting the completion of the project. I would like to express my gratitude to **Dr. Smriti Nagaria, Associate Professor & Additional HoD, St. Joseph's Degree & PG College,** for her constant encouragement, constructive suggestions, and keen supervision, which have greatly contributed to the successful completion of this study. Lastly, I am thankful to **Rev. Fr. Anthony Sagayaraja Principal and Prof. Nagunuri Srinivas, HoD, Department of Business Management, St. Joseph's Degree and PG College** whose support and encouragement have provided me with this opportunity and academic environment to carry out this project successfully.

This project would not have been possible without the guidance and encouragement of all these individuals, and I sincerely appreciate their contributions.

ABSTRACT

Fundamental analysis helps the investor to find the true value of a company's stock by studying its financial health, industry position, and overall economic conditions. It focuses on long-term growth rather than short-term market fluctuations. This study follows the EIC framework, which examines India's GDP and inflation over the past five years, compares the tourism, cement, and automobile sectors, and evaluating the financial stability of IRCTC ltd, Thomas Cook India, and Ease Trip Planner ltd using key financial ratios. The objectives of this study is to analyze the Indian economy, to see the performance of selected industries, evaluate the financial health of companies in the tourism sector, identify financial trends over the last five years, and provide suggestions based on the findings. Data is collected from secondary sources like company reports and financial websites, using ratios such as operating profit margin, return on assets, return on capital employed, and earnings per share used to measure profitability and stability. The findings show that India's economy has recovered post-pandemic, boosting business growth. The tourism industry has rebounded, the cement industry remains stable, and the automobile sector is shifting towards electric vehicles. From the companies analyzed, IRCTC ltd has strong profitability, Ease Trip Planner ltd has shown high efficiency, and Thomas Cook India is struggling but expected to improve. Based on the analysis, investors should choose stable companies with good profits, the tourism sector can expand with increased travel, and companies should manage finances wisely to reduce risks. This study concludes that fundamental analysis is key for assessing financial health and long-term investment potential.

CHAPTER I

INTRODUCTION

1.1 INTRODUCTION

Fundamental analysis helps us find the true value of the company's stock. It checks whether the stock price is too high or too low by looking at how strong the company is financially. This analysis not only looks at a company's financial health but also helps us understand where the company stands in its industry and how the overall economy affects it. Instead of focusing on short-term market trends, fundamental analysis focus on long-term growth by studying profits, assets, debts, and future opportunities.

Fundamental analysis is divided into three parts: economic factors, industry factors and company factors.

1. **Economic factors**: This looks at how the economy is doing. It studys things like how fast the economy is growing, inflation rates, and country's GDP. A strong economy usually means businesses will do well, while a weak economy can make business conditions tough.
2. **Industry factors:** here, we focus on a specific industry. We check its growth, competitors, and future potential. We compare different companies within that industry to see which once are performing better.
3. **Company factors:** It focuses on individual company within the Industry. We analyze its financial reports, sales, profits, losses, and important financial ratios. Comparing these factors help us understand which company is the best investment choice.

The goal of the study is to compare three companies in the tourism industry: IRCTC ltd, Thomas cook India, and Ease Trip Planner ltd for last five years. The objective is to evaluate their profitability, stability, and investment potential to determine which is the best investment. This approach helps investor make decisions based on real financial data rather than market speculation.

1.2 NEED FOR THE STUDY

Understanding a company's financial performance is key to make smart investment and business decisions. This study analyze financial statement and key ratios to assess stability, profitability, and long-term growth. It also tracks financial trends over time, highlights strengths and weakness, and help in identifying the best company for investment. This helps in better financial planning, decision-making and financial management.

1.3 SCOPE OF THE STUDY

1. The study is carried at 4R Investments, Kachiguda.
2. The study is conducted for the period of 60 days.
3. This study is giving data of 5 years from FY 2029-2020 to FY 2023-24.

1.4 OBJECTIVES OF THE STUDY

1. To study the Indian economy for the Industry.
2. To study the performance of selected Industry.
3. To study the financial performance of selected companies of tourism Industry.
4. To Identify financial trend over last 5 years of selected companies.
5. To provide suggestions based on the performance of the study.

1.5 RESEARCH METHODOLOGY

1.5.1 RESEARCH DESIGN

This study includes both Analytical and Descriptive research approach. This approach is used to evaluate a company's financial performance. Here, in descriptive research helps in understanding and explaining the company's historical data and financial statements. In analytical research we are evaluate the financial performance using ratios and trends that helps in allowing us to interpret the data to make informed decisions about company's future prospects.

1.5.2 DATA SOURCE

The data is collected from secondary source like textbooks, journals, internet, newspaper.

1.5.3 SAMPLE DESIGN

1.5.3.1 SAMPLE SIZE

The sample size of the study is for the 5 years from FY 2019-2020 to FY 2023-2024.

1.5.4 STATISTICAL TOOLS & TECHNIQUES USED FOR DATA ANALYSIS

In this study the financial ratios are used like:

1. Operating profit margin
2. Return on Assets
3. ROCE
4. Earnings per Share
5. Asset Turnover Ratio
6. Interest Turnover Ratio
7. Debt-to-Equity Ratio
8. Price-to-Earnings
9. Price-to-Book Ratio
10. Graphs.

1.6 CHAPTERIZATION

This study includes 5 chapters

CHAPTER-I

The chapter I consist of the Introduction, Needs for Study, Scope, Objectives, and Research methodology of the Study.

CHAPTER-II

The chapter II consist all about fundamental analysis and articles that is related to it.

CHAPTER-III

The chapter III consist about the 4R Investments, about the Industry its vision, mission, its products and services.

CHAPTER-IV

The chapter IV consist all about data analysis and interpretation of the collected data.

CHAPTER-V

The chapter V consist of findings, suggestions, conclusion and limitations of the study.

CHAPTER II

LITERATURE REVIEW

2.1 MEANING AND DEFINATION OF FUNDAMENTAL ANALYSIS

MEANING

Fundamental analysis is a detailed process used by investors to study and understand the true value of a company before investing in its shares. It focuses on evaluating a company’s overall performance, financial health, and future growth potential by examining both numerical data and non-financial factors. This analysis helps investors decide whether a company's stock is priced fairly, too high, or too low in the market. To do this, investors look at the company's financial statements such as the balance sheet, which shows the company’s assets and liabilities; the profit and loss account, which reveals the company’s income and expenses; and the cash flow statement, which tracks how money moves in and out of the business. These help in understanding whether the company is profitable, stable, and capable of growing in the future. Apart from these, fundamental analysis also considers qualitative factors such as the company’s business model, the quality of its management, the strength of its brand, the level of competition in its industry, and the impact of economic conditions and government policies. The purpose of this analysis is to identify companies that are fundamentally strong, have long-term growth potential, and are available at a reasonable price. In simple words, fundamental analysis is like doing a full background check or health check-up of a company to make sure it is a safe and smart choice for long-term investment. It helps investors avoid risky or weak companies and select those that are more likely to give good returns in the future. It builds confidence in investment decisions by focusing on long-term value rather than short-term market movements. Overall, fundamental analysis is a powerful tool for anyone looking to invest wisely and grow their wealth with lesser risk over time.

DEFINATION

Fundamental analysis measures a security's intrinsic value by examining a company's financial statements along with broader economic indicators.

2.2 OBJECTIVES OF FUNDAMENTAL ANALYSIS

1. **Determine the intrinsic value**: The primary goal of fundamental analysis is to calculate the intrinsic or "true" value of a stock. This value represents the stock's worth based on a company's financial performance, future growth prospects, and overall market conditions. By comparing this intrinsic value to the stock's current market price, investors can determine whether the stock is overvalued or undervalued.
2. **Identify undervalued or overvalued stocks**: Fundamental analysis helps investors spot stocks that are either undervalued (priced below their intrinsic value) or overvalued (priced above their intrinsic value). Buying undervalued stocks allows investors to profit when the market corrects itself, while avoiding overvalued stocks helps prevent potential losses when prices drop.
3. **Make long-term investment decisions**: Rather than focusing on short-term market fluctuations, fundamental analysis is designed to aid in long-term investment strategies. By examining the company's overall financial health, future growth prospects, and the broader economic environment, investors can make informed decisions that will yield returns over the long term.
4. **Evaluate financial health**: Fundamental analysis provides a comprehensive assessment of a company's financial statements, including its balance sheet, income statement, and cash flow statement. This analysis helps investors evaluate the company's stability, profitability, and growth potential, ensuring that they are investing in financially sound companies.
5. **Understand economic and industry factors**: Fundamental analysis not only focuses on a company's internal financials but also considers external factors such as the overall economic environment, industry trends, competition, and regulatory conditions. By understanding these broader factors, investors can better gauge the company's potential for success in the future.
6. **Assess management efficiency:** Fundamental analysis also helps in evaluating the quality and effectiveness of a company's management team. Strong, experienced, and ethical leadership plays a crucial role in a company's success. By studying the decisions made by management, their track record, and how they handle business operations, investors can judge whether the company is in capable hands.

7. **Estimate future earnings and growth potential:** One important goal of fundamental analysis is to predict how much the company might earn in the future and how fast it can grow. By analysing past performance, market demand, product development, and expansion plans, investors can estimate whether the company will generate higher profits and increase in value over time.
8. **Support valuation comparisons between companies:** Fundamental analysis allows investors to compare the value of different companies within the same industry. By using financial ratios and performance indicators, investors can decide which company offers better value for investment based on its fundamentals.
9. **Reduce investment risks:** By deeply analysing a company's financial condition and business environment, investors can avoid investing in weak or unstable companies. This helps in reducing the chances of losses and improves the safety of investments.
10. **Help in building a strong investment portfolio:** Fundamental analysis helps investors select a mix of high-quality and fundamentally strong companies. This leads to the creation of a well-balanced and diversified portfolio that can give stable returns and withstand market ups and downs over the long term.

2.3 FEATURE OF FUNDAMENTAL ANALYSIS

1. **Focus on financial data**: Fundamental analysis relies heavily on a company’s financial documents, such as income statements, balance sheets, and cash flow statements. These documents provide important information about how much money the company makes, how much it spends, and what assets and liabilities it has. By analyzing this financial data, investors can get a clear picture of the company's performance and overall health.
2. **Long-term perspective**: This type of analysis is designed for investors who are looking to hold their investments for an extended period, such as months or years. Instead of trying to make quick profits from short-term market changes, fundamental analysis helps investors make informed decisions based on the company's long-term potential for growth and success. This approach encourages patience and careful consideration rather than impulsive trading.

3. **Includes external factors**: Fundamental analysis does not only look at the company's internal financials but also takes into account various external factors that can impact its performance. This includes economic indicators like interest rates, inflation, and unemployment rates, as well as government policies and regulations. By understanding these external factors, investors can better assess how they might affect the company's future profitability and stability.
4. **Intrinsic Value Determination**: It aims to find out the true worth of a stock. By studying financial data, analysts can estimate what a stock should be worth and compare it to its current price. This helps identify if a stock is a good buy or too expensive.
5. **Use of Financial Ratios**: Analysts use financial ratios, such as Price-to-Earnings (P/E) and Return on Equity (ROE), to evaluate a company's performance. These ratios help investors understand profitability and how well the company is doing compared to others.
6. **Emphasis on qualitative factors:** Fundamental analysis also considers non-numerical or qualitative factors like the company’s brand reputation, management quality, business model, innovation, and competitive advantage. These factors can strongly influence a company's future success and are important to consider along with financial data.
7. **Helps in decision-making for value investing:** This analysis is especially useful for value investors who aim to buy strong companies at a lower price than their actual worth. By identifying undervalued stocks, fundamental analysis supports smart buying decisions that can offer better returns over time.
8. **Based on real business performance, not just market trends:** Unlike technical analysis which focuses on price charts and market patterns, fundamental analysis looks at the actual performance and strength of a company. It helps investors invest in companies that are truly performing well, not just popular in the market temporarily.

2.4 TYPES OF FUNDAMENTAL ANALYSIS

Fundamental analysis helps investors decide whether a company is a good investment by looking at two main types of information:

I. Quantitative

II. Qualitative

I**. Quantitative**: This method focuses on numbers such as sales, profits, and other measurable data. It mainly uses financial statements and financial ratios.

1. Financial statements: Financial statements are official records that show how well a company is doing financially. They give a clear and organized picture of a company's performance, health, and stability. Investors use these statements to understand whether a company is strong, profitable, and worth investing in. The three main types of financial statements are:

- **Income Statement**: Also known as the Profit and Loss Statement, this report shows how much money a company earned (called revenue) and how much it spent (called expenses) during a specific time—usually every quarter or year. It ends with the net profit or net loss, which is the amount left after all costs are subtracted from the revenue.
  This statement helps investors understand:
- How much money the company makes from its core business.
- Whether the company is operating efficiently.
- If the company is growing its profits over time.

In simple words, the income statement tells you whether the company is making money or losing money.

- **Balance Sheet**: The balance sheet gives a snapshot of a company's financial position at a specific moment in time. It lists:
  1. **Assets** – What the company owns (like cash, buildings, machinery, and inventory).
  2. **Liabilities** – What the company owes (like loans, bills, and other debts).

3. **Equity** – The remaining value that belongs to the owners or shareholders after all debts are paid.

- The basic formula is: **Assets = Liabilities + Equity**

This statement helps investors know:

1. Whether the company has more assets than debts (which is a sign of financial strength).
2. If the company can pay its short-term and long-term obligations.
3. How much the shareholders' investment is worth.

- **Cash Flow Statement**: This statement tracks how money flows in and out of the company. It is divided into three parts:
    1. **Operating activities** – Cash from the company's main business (like sales and expenses).
    2. **Investing activities** – Cash spent on or earned from investments (like buying machinery or selling an old asset).
    3. **Financing activities** – Cash related to borrowing, repaying loans, or issuing shares.

This report helps investors understand:

- If the company generates enough real cash to support its operations.
- Whether the company relies too much on borrowing or outside funding.
- If the company has enough liquidity to survive in tough times.
- Even if a company looks profitable on paper, the cash flow statement shows whether it's actually receiving and managing cash well. A company needs solid cash flow to pay salaries, buy materials, repay loans, and grow its business.

2. Financial Ratios: Financial ratios are tools used to simplify and understand complex financial data from a company's financial statements. They help investors, analysts, and business managers quickly evaluate a company's performance, efficiency, profitability, and financial health. Ratios make it easy to compare companies of different sizes, track performance over time, and spot strengths or weaknesses in operations.

- **Profitability Ratios:** Profitability ratio shows how well a company earns money after covering cost and expenses. A higher profitability ratio is better because it means the company is making more profit.
    1. **Operating Profit Margin**: it measures how much profit the company makes after paying costs like rent, salaries, electricity etc, but before interest and taxes.

       Formula : **operating profit / revenue * 100**
    2. **Return on Assets (ROA**): shows how well a company uses its assets like, factories, machines, inventory to generate profit. A higher ROA is better.

       Formula: net income / total assets * 100
    3. **Return on capital employed (ROCE):** it measures how effiently a company uses its total capital to generate profits. It tells investors whether the company is making good use of its resources.

       Formula: EBIT / capital employed * 100

       Capital employed = total assets – current liabilities
    4. **Earnings per share (EPS):** Earnings Per Share tell how much profit a company makes for each share of its stock. It helps investors understand whether a company is growing or struggling.

       Formula: net income / outstanding share

       Outstanding share = equity share capital / par value
- **Efficiency Ratios**: efficiency ratio shows how well a company manages its assets to generate sales.
    1. **Inventory Turnover ratio**: The Inventory Turnover Ratio show how quickly a company sells and replaces its inventory in a given period. It helps measure efficiency in managing stock.

       Formula: **EBIT / interest expenses**

       EBIT = profit before tax + interest
    2. **Asset Turnover ratio** : The asset turnover ratio shows how efficiency a company uses its assets to generate sales. It tells investors if the company is getting good returns from its investments in factories, machinery, and other assets.

       Formula: **revenue / average total assets**

- **Solvency Ratios / leverage ratio:**
    1. **Debt-to-Equity Ratio**: Shows how much the company relies on debt to finance its operations. A high ratio indicates more reliance on debt.
    2. **Interest Coverage Ratio:** Shows how easily the company can pay interest on its debt.
- **Valuation Ratios**:
    1. **Price-to-Earnings (P/E) Ratio**: Compares the stock price to the company's earnings. A high P/E might mean the stock is overpriced
    2. **Price-to-Book (P/B) Ratio:** Compares the stock price to the company's book value (assets minus liabilities). A low P/B could mean the stock is undervalued.

II. Qualitative: This method looks at non-numerical factors, such as the company's reputation, management quality, and market position.

1. Business Model: The business model explains how a company earns money. It includes the company's main products or services, its pricing strategies, customer base, and how it delivers value. A clear and sustainable business model is essential for long-term success. For example, a company that relies on just one product or one customer might face trouble if demand drops. But a business with a diverse and flexible model can adapt better to changes in the market. Investors look for business models that are scalable, meaning they can grow and expand without losing efficiency.

2. Industry and Market Analysis: This focuses on the company's position within its industry and how the overall market is performing. Analysts study:

- The size and growth rate of the industry
- Trends affecting the industry (e.g., technology, consumer behavior)
- Level of competition and the company's market share

A popular tool used here is Porter's Five Forces, which examines:

- Competition among existing players
- Threat of new entrants
- Bargaining power of suppliers
- Bargaining power of customers
- Threat of substitute products

This helps investors understand how tough the market is and whether the company can survive and grow in that environment.

3. Management and Leadership: The people leading the company—especially top executives like the CEO and CFO—play a key role in the company's success. Investors want to know:

- Are the leaders experienced and capable?
- Do they have a good track record of growing businesses?
- Are they making ethical and strategic decisions?
- Are they focused on creating value for shareholders?

Strong leadership can help a company overcome challenges and make smart long-term decisions, while poor leadership can lead to poor results—even if the financials look good now.

4. Competitive Advantage: This refers to the unique strengths a company has that protect it from competitors. Think of it like a "moat" around a castle. The bigger the moat, the harder it is for others to copy or beat the company. Common competitive advantages include:

- A strong brand name (like Apple or Coca-Cola)
- Patents or exclusive technology
- A loyal customer base
- Efficient cost structures or supply chains
- Network effects (e.g., more users attract even more users like Facebook or WhatsApp)

A strong competitive advantage makes the company more stable and profitable in the long run.

5. Macroeconomic Factors: These are the external, big-picture conditions that affect the entire economy and, in turn, influence how a company performs. Examples include:

- Inflation: Rising prices may increase costs and reduce profits
- Interest Rates: Higher rates can make borrowing more expensive for companies
- Government Policies: New regulations or tax changes can impact industries
- Global Events: Political instability, pandemics, or trade wars can change market dynamics

Though companies cannot control these factors, understanding them helps investors prepare for risks and spot opportunities.

2.5 CHARACTERISTICS OF FUNDAMENTAL ANALYSIS

1. **Focus on real numbers**: Fundamental analysis is all about using concrete data to understand a company's financial health. This includes looking at profits (how much money the company makes), debts (what it owes), and growth (how much it's expanding). By relying on these real numbers, investors can get a clear picture of whether a company is doing well or struggling.
2. **Investor-friendly**: This approach is beneficial for investors because it helps them spot good investment opportunities. By analyzing the financial data, investors can find companies that are likely to perform well in the long run, which can lead to significant gains over time. It's not just about making quick profits; it's about finding solid investments that will pay off in the future.
3. **Emphasis on growth**: Fundamental analysis seeks to identify financially strong companies with steady growth potential. Investors look for businesses that not only have a good current financial situation but also the ability to grow and succeed in the future. This focus on growth helps investors find companies that are likely to increase in value, making them more attractive investment options.

2.6 NATURE OF FUNDAMENTAL ANALYSIS

Fundamental analysis is a method used by investors to find the true value of a company based on its financial health, business performance, and long-term growth potential. Instead of watching the daily ups and downs of stock prices like traders do, this approach focuses on whether a company is strong and stable enough to succeed over time. It looks at the bigger picture how much money the company earns, how well it manages its expenses, how it grows, and how it stands in its industry. The goal is to identify good companies to invest in for the long term, not for quick profits. This analysis is especially useful for people who want to invest patiently and build wealth slowly and steadily.

1. **Focuses on long – term investments**: Fundamental analysis is mainly used by investors who want to invest for the future, not for quick profits. It helps identify companies that have strong foundations, stable growth, and long-term potential. The idea is to buy and hold these investments for years, allowing time for the company's true value to increase. This method is suitable for those who believe in slow and steady growth, rather than trying to make money by buying and selling frequently.
2. **Uses financial statement**: One of the key tools in fundamental analysis is the study of financial statements, such as:

- Income Statement – shows profits or losses over a period
- Balance Sheet – shows what the company owns and owes at a point in time
- Cash Flow Statement – shows how cash moves in and out of the business

These statements give a complete picture of the company's financial health, including how much money it makes, where it spends, how stable it is, and how well it manages its resources.

3. **Looks at EIC Analysis:** Fundamental analysis includes a top-down approach:

- Economic Analysis – How is the overall economy doing? Is it growing or slowing down?
- Industry Analysis – Is the company in a booming or declining industry?
- Company Analysis – How well is the company performing within its industry?

This full-circle view helps investors understand how external factors like inflation, interest rates, and industry competition affect the company. A strong company operating in a growing industry and a healthy economy is considered a good long-term investment.

4. **Finds intrinsic value:** Intrinsic value means the true worth of a company's stock, based on its business performance and future potential—not just on current market prices. Fundamental analysis helps calculate this value using financial data and forecasts. If the stock is trading below its intrinsic value, it is considered undervalued (a good buy). If it's above, it may be overvalued (better to avoid). This helps investors make smart decisions rather than relying on market rumors.
5. **Uses of financial ratios:** To simplify the financial data, analysts use financial ratios to compare performance and evaluate companies. Some key ratios are:
   - P/E Ratio (Price-to-Earnings) – shows how much investors are paying for ₹1 of the company's earnings
   - ROE (Return on Equity) – shows how well the company uses investors' money to make profits
   - ROCE (Return on Capital Employed) – checks how efficiently the company uses all its capital
   - Debt-to-Equity Ratio – compares a company's total debt to its shareholder's equity, showing financial risk

   These ratios help investors analyze profitability, stability, and risk, and make better comparisons between different companies.

6. **Ignore short** – **term market fluctuations:** Unlike traders who try to profit from daily price changes, fundamental analysts ignore short-term ups and downs. They don't panic during market crashes or sudden rises, because their focus is on the company's real business performance. This long-term view helps investors stay calm and avoid emotional decisions. Instead of guessing the market, they trust in the company's strength and growth potential.

2.7 IMPORTANCE OF FUNDAMENTAL ANALYSIS

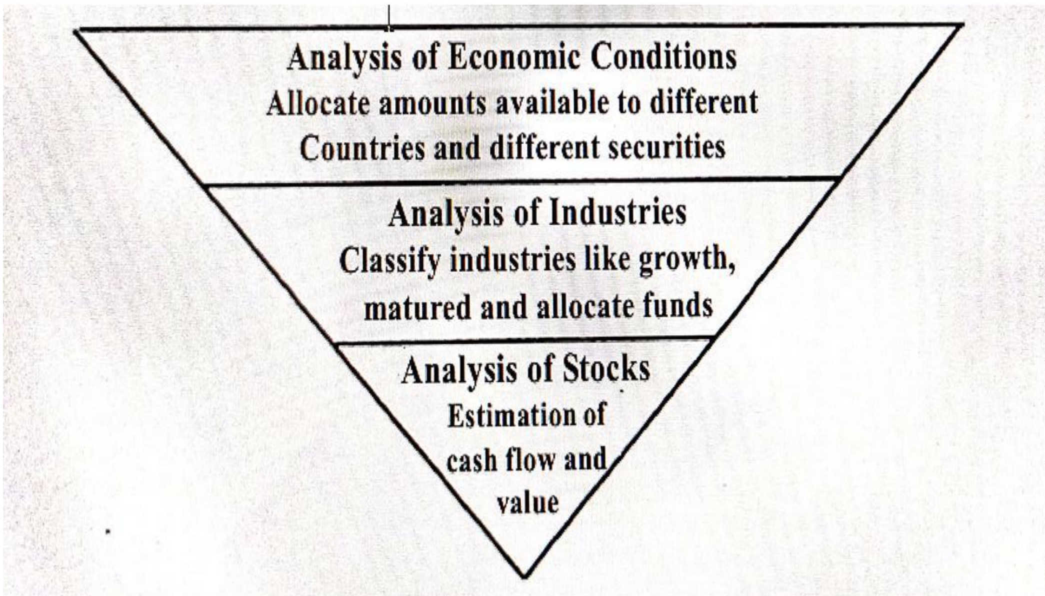
1. **Risk reduction**: Fundamental analysis plays a crucial role in helping investors understand the true value of a stock. By evaluating a company's financial health and performance, investors can identify whether a stock is overvalued or undervalued. This understanding helps them avoid risky investments that might look appealing based on short-term market trends but lack solid fundamentals. By making informed decisions, investors can protect their capital from potential losses.
2. **Finding good opportunities**: One of the key benefits of fundamental analysis is its ability to uncover hidden gems in the stock market—companies that may be undervalued but have strong growth potential. By analyzing financial statements, management quality, and market conditions, investors can spot these opportunities before they become widely recognized. This proactive approach can lead to substantial returns when these undervalued stocks eventually reach their true value.
3. **Supports long-term goals**: Fundamental analysis encourages investors to focus on long-term strategies rather than chasing quick profits. By understanding a company's potential for growth and stability, investors can make decisions that align with their financial goals. This long-term perspective helps build a more resilient investment portfolio, as it prioritizes sustainable growth over short-term market fluctuations.
4. **Enhanced Decision-Making**: By relying on solid data and thorough analysis, investors can make more informed decisions. This minimizes the emotional aspects of investing, as decisions are based on objective information rather than speculation or market hype.
5. **Market Behavior Insight**: Fundamental analysis also provides insights into market behavior and economic conditions. Understanding the factors that influence a company's performance such as economic cycles, industry trends, and competitive landscapes can help investors anticipate market changes and adjust their strategies accordingly.

2.8 PROCESS OF FUNDAMENTAL ANALYSIS

EIC ANALYSIS - Fundamental analysis is a method used by investors to evaluate the true value of a stock and make smart investment decisions. The EIC approach helps break down this process into three structured levels—Economic, Industry, and Company analysis. It helps investors understand the broader picture first, then narrow their focus to the best-performing companies.

1. **Economic Analysis**: This is the first and most broad level of analysis, where investors study the overall health and direction of the economy. Factors like the GDP growth rate indicate how fast the economy is expanding or contracting. A high GDP growth rate typically reflects rising business activity and improved investor confidence. The inflation rate is examined to understand changes in purchasing power and cost of living, which directly affect consumer spending. Interest rates are crucial as they influence borrowing costs for both businesses and consumers—lower rates encourage borrowing and investing, while high rates may slow them down. In addition, government policies like tax reforms, subsidies, infrastructure development, and monetary policies (like repo rate changes) can also have a significant impact on economic performance. A strong and growing economy often leads to improved business performance and stock market growth, while a weak economy may lead to lower profits and market volatility.
2. **Industry Analysis**: After evaluating the economy, investors narrow their focus to specific industries. This step involves identifying which sectors are likely to perform well under current or expected economic conditions. For example, sectors like IT, real estate, and luxury goods often thrive in a booming economy, while healthcare, FMCG (Fast-Moving Consumer Goods), and utilities remain stable even during downturns, making them defensive investments. Investors study industry trends, the level of competition, market demand, entry barriers, and regulatory factors. A growing industry with less competition, supportive government policies, and high demand is usually a favorable choice for investment. Technological advancements and global market potential also influence the attractiveness of an industry.

3. **Company Analysis**: Once a promising industry is selected, the final step is to choose the best-performing company within that industry. This involves a deep dive into the company's financial health, management efficiency, and growth prospects. Investors review financial statements such as the income statement, balance sheet, and cash flow statement to understand the company's revenue, expenses, assets, liabilities, and cash movement. Key financial ratios like Price-to-Earnings (P/E) Ratio, Earnings Per Share (EPS), Return on Capital Employed (ROCE), Debt-to-Equity Ratio, and Net Profit Margin help assess profitability, efficiency, and financial risk. Additionally, qualitative aspects such as the management team's experience, corporate governance, brand reputation, and future strategies are considered. A financially sound, well-managed company operating in a strong industry is more likely to deliver consistent returns and long-term growth.



EIC ANALYSIS FRAMEWORK

By using the EIC framework, investors avoid making decisions based on guesswork or market rumors. Instead, they rely on data-driven analysis to minimize risk, identify solid investment opportunities, and maximize potential returns. This step-by-step approach helps build a strong and diversified investment portfolio that aligns with market trends and long-term financial goals.

2.9 APPROCAH OF FUNDAMENTAL ANALYSIS

1. **Top-Down Approach**: The top-down approach is a systematic method of investment analysis that begins by assessing the broader macroeconomic environment, then narrows down to specific industries, and finally focuses on selecting the best companies within those industries. This approach ensures that investments are made in businesses that not only have strong internal fundamentals but also operate in favorable external conditions, enhancing their chances of success.
    - **Step 1:** Economic Analysis The process starts by evaluating the overall economy. Investors study major economic indicators such as Gross Domestic Product (GDP) growth, inflation rates, interest rates, exchange rates, employment levels, and fiscal/monetary policies. These factors reveal whether the economy is in a growth phase, slowdown, or recession. A strong and growing economy often leads to better corporate earnings, higher consumer demand, and stronger investor confidence—making it more favorable for investment.
    - **Step 2:** Industry Selection Based on the economic outlook, investors then identify industries that are likely to benefit from current economic trends. For example, in a low-interest environment, real estate and automobile sectors may thrive, while during uncertain economic times, defensive industries like healthcare, FMCG, and utilities tend to be more resilient. At this stage, investors analyze factors like industry growth rate, level of competition, barriers to entry, and regulatory impacts to choose sectors with strong potential and stability.

- **Step 3:** Company Selection After selecting the right industry, attention turns to finding the best-performing companies within that industry. Investors assess each company's financial strength (via income statements, balance sheets, and cash flow statements), key ratios (like ROE, ROCE, and P/E), management efficiency, competitive edge, and future growth prospects. Only those companies that show consistent performance, sound strategy, and sustainable competitive advantages are considered for investment.

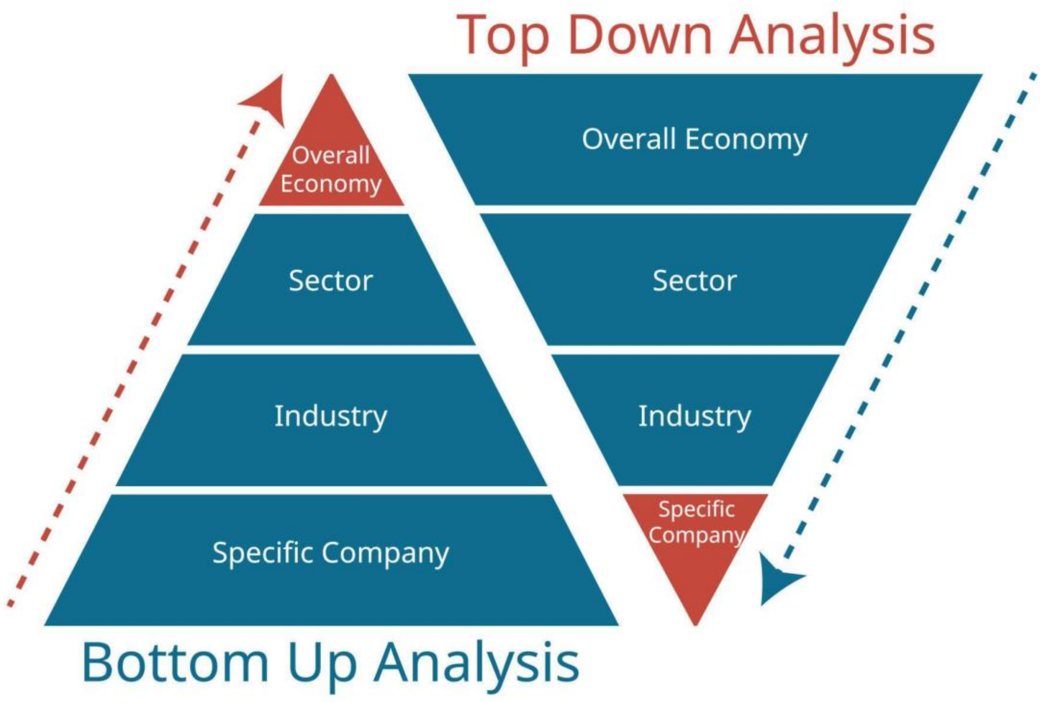
This approach allows investors to make strategic decisions based on economic and industry cycles. It's especially valuable for risk-averse investors who want their portfolios to be aligned with broader market trends and minimize exposure to weak or declining sectors.

2. **Bottom-Up Approach:** The Bottom-Up Approach is a company-centric method of fundamental analysis that begins with a thorough evaluation of individual companies rather than starting with macroeconomic indicators or industry trends. This strategy is built on the belief that exceptional companies can perform well over time regardless of the broader economic climate or industry cycles. Investors adopting this approach aim to identify companies that possess strong internal fundamentals, even if they operate in temporarily underperforming industries or during economic downturns.

   The primary focus is on the core fundamentals of the company, which include examining its financial health, corporate governance, business strategy, product offerings, market share, leadership quality, innovation, and competitive advantages. Investors also delve into financial reports and performance metrics—such as the Price-to-Earnings (P/E) ratio, Earnings per Share (EPS), Return on Equity (ROE), debt-to-equity ratio, and cash flow generation—to assess the company's ability to generate consistent profits, manage debt, and grow sustainably over time.

Another key feature of the bottom-up approach is that it is largely independent of external macroeconomic or sectoral influences. While top-down strategies wait for favorable economic or industry conditions, bottom-up investors believe that well-managed companies with resilient business models can thrive even in challenging environments. These investors seek to capitalize on market inefficiencies by buying undervalued or overlooked stocks, especially when short-term negative sentiment has depressed the stock price, despite strong company fundamentals.

This approach is especially favored by value investors and long-term growth investors, as it requires deep research, patience, and a long-term view. By focusing on the intrinsic value of a business rather than external trends, the bottom-up approach often helps in discovering high-potential investment opportunities that others might miss.



2.10 ARTICLES

ARTICLE 1

Yevi Dwitayanti, Ertawan Juliadi, and A. Ratna Sari Dewi (2023), in their research article "Stock Fundamental Analysis and Investment Decision Making," discuss the role of fundamental analysis in stock market investments. The study finds that 75% of investors, particularly institutional investors and analysts, actively use fundamental analysis in their strategies. Key financial ratios like ROE, EPS, PBV, and DPR play a significant role in selecting stocks, while broader economic factors such as inflation, market trends, and regulations also influence investment decisions. The research establishes a strong positive correlation between the use of fundamental analysis and investment success. It also highlights that investor behavior is influenced by emotions and biases, such as herd mentality and confirmation bias. Overall, the study emphasizes that fundamental analysis is a crucial tool for investors and policymakers in making informed financial decisions.

ARTICLE 2

Deden Tarmidi, Rachmat Pramukty, and Taufik Akbar (2020), in their research article "Fundamental Analysis of Financial Ratios on Stock Prices," examine the impact of financial ratios on stock prices. The study focuses on key ratios such as Return on Assets (ROA), Net Profit Margin (NPM), and Debt to Equity Ratio (DER) and how they influence stock prices before and after financial statements are published. The findings show that ROA and NPM have a stronger effect on stock prices after publication, indicating that investors rely on these ratios for decision-making. In contrast, DER has a weaker impact after publication, suggesting that debt levels may not significantly influence stock prices. The study reinforces the importance of fundamental analysis in evaluating company performance and making informed investment decisions.

AETICLE 3

Dr. Disha Pathak (2021), in the research article "Intrinsic Value in Assessing the Fairness of IT Stock Price Using Fundamental Analysis," examines how fundamental analysis helps investors determine the real worth of stocks. The study focuses on eight IT companies in India and compares their intrinsic value with market value to assess whether they are overvalued or undervalued. Key financial ratios such as Earnings Per Share (EPS), Price-to-Earnings (PE) Ratio, Return on Equity (ROE), and Dividend Payout Ratio (DPR) are used to evaluate stock performance. The findings reveal that all selected stocks were overvalued, suggesting that investors should consider selling them as prices might decline in the future. The study highlights the importance of fundamental analysis in making informed investment decisions.

ARTICLE 4

Gabriel Druta and Laura Raisa Miloș (2022), in their research article "Importance of Fundamental Analysis in the Market Valuation of the Medical Sector. Evidence from a Developed Stock Market," explore how fundamental analysis helps in valuing companies. The study examines 24 medical sector firms listed on the Frankfurt Stock Exchange from 2008 to 2019, analyzing key financial indicators like Return on Equity (ROE), Price-to-Book (P/B) Ratio, Debt-to-Equity (D/E) Ratio, Earnings Per Share (EPS), Price-to-Earnings (P/E) Ratio, and Dividend Yield (DIVY). The results show that ROE has the most positive impact on stock prices, while high debt levels (D/E) and overvaluation (P/E) negatively affect market value. The study highlights that fundamental analysis is crucial for investors to assess stock prices and make informed investment decisions.

ARTICLE 5

Florin Cornel Dumiter and Florin Marius Turcaș (2023), in their research chapter "Fundamental Analysis versus Technical Analysis," discuss the importance of evaluating financial instruments for making investment decisions. The study compares fundamental analysis and technical analysis, explaining how investors use financial ratios, balance sheet indicators, and cash flow analysis to determine whether a company is under or overvalued. It highlights the role of financial statement analysis, periodic reports, and market multipliers in assessing a company's true value. The chapter also touches on portfolio selection, risk-reward evaluation, and market sentiment, emphasizing how fundamental analysis plays a key role in long-term investment decisions.

ARTICLE 6

Aditya Hermawan (2022), in the research article "Stock Valuation Analysis in Making Investment Decisions During the COVID-19 Pandemic," examines how fundamental analysis helps in determining the intrinsic value of stocks affected by the pandemic. The study analyzes 28 companies across 11 sectoral indices in Indonesia using Price to Book Value (PBV) and the Dividend Discount Model (DDM) to assess stock valuation. The findings suggest that stocks classified as undervalued (cheap) are the best investment choices, and DDM is the most accurate stock valuation method based on statistical testing. The study highlights that fundamental analysis plays a crucial role in investment decision-making, especially during uncertain economic conditions like the COVID-19 pandemic.

ARTICLE 7

Budi Rustandi Kartawinata, Aldi Akbar, Ghazi Abiyu Winata, and R. Susanto Hendiarto (2021), in their research article "The Influence of Fundamental Analysis on Stock Prices (Case Study of UNVR Stock in IDX Period 2015-2020)," examine how fundamental analysis affects stock prices. The study analyzes Price Earnings Ratio (PER), Price to Book Value (PBV), and Return on Equity (ROE) as key financial indicators influencing stock price movements. Using quarterly financial data of PT Unilever (UNVR) from 2015-2020, the research finds that PER and ROE have a significant negative impact on stock prices, while PBV has no significant effect. The study highlights that fundamental analysis is essential in evaluating a company's financial health and making informed investment decisions.

ARTICLE 8

Sriyank Levi, Prathima P, and Sarah Merlyn (2021), in their research article "Fundamental and Technical Analysis Leads to a Systematic Investment Decision in Stock Market Equities," examine how fundamental analysis and technical analysis help investors make informed investment decisions. The study highlights that fundamental analysis focuses on financial ratios (liquidity ratio, debt-equity ratio, ROE, profit margins) and financial statements (balance sheet, income statement, cash flow statement) to determine a company's intrinsic value. It also discusses valuation methods like asset-based valuation, income-based valuation, and discounted cash flow (DCF) modeling to assess a company's financial health. The findings suggest that fundamental analysis is essential for long-term investors, helping them evaluate a company's performance and make better stock selection decisions.

ARTICLE 9

Caner Demir (2019), in the research article "Macroeconomic Determinants of Stock Market Fluctuations: The Case of BIST-100," studies how economic factors affect stock prices in Turkey's BIST-100 stock market from 2003 to 2017. The research finds that economic growth, a strong local currency, foreign investments, and portfolio investments help stock prices rise, while higher interest rates and increasing crude oil prices push stock prices down. The study suggests that a stable economy with strong international investments and lower costs can improve stock market performance. This aligns with the economic analysis (E) in EIC analysis, showing how macroeconomic factors influence stock markets.

ARTICLE 10

Dinh Tran Ngoc Huy, Pham Minh Dat, and Pham Tuan Anh (2020), in their research article "Building an Econometric Model of Selected Factors' Impact on Stock Price: A Case Study," study how economic factors affect stock prices in Vietnam's banking sector. They analyze GDP growth, inflation, interest rates, exchange rates, and stock market indexes from 2014 to 2019 to see their impact on Sacombank's (STB) stock price. The results show that GDP growth, inflation, and lending rates have the most influence, mostly in a negative way. The study suggests that controlling inflation, stabilizing interest rates, and supporting economic growth can help improve stock market performance. This aligns with economic analysis (E) in EIC analysis, as it shows how macro factors impact stock prices.

CHAPTER III

COMPANY PROFILE

3.1 INDUSTRY INTRODUCTION

3.1.1 Introduction to the Financial Services Industry

The financial services industry is one of the most important pillars of any economy. It includes a wide range of businesses that help people and companies manage, grow, and protect their money. This industry covers banks, insurance companies, stockbrokers, investment firms, credit card companies, mutual funds, real estate services, and financial advisors. Each of these sectors plays a unique role in supporting financial needs—for example, banks provide savings and current accounts, give out loans, and offer credit services; insurance companies protect against risks like accidents, theft, or health problems; and investment firms help individuals and businesses grow their wealth through stocks, bonds, and other investment tools.

The financial services industry plays a key role in the smooth functioning of the economy by ensuring the free flow of money and credit. It supports personal financial goals like buying a home, saving for education, or planning for retirement, and also helps businesses by providing capital and financial guidance. Moreover, it boosts economic development by encouraging savings, supporting entrepreneurship, and increasing consumer confidence. When the financial sector is strong and well-regulated, it brings stability to the entire economy by managing risks and promoting responsible financial behavior. In short, this industry connects people with the money and resources they need to achieve financial success and security.

In today's fast-moving world, the financial services industry is also evolving with the help of technology. Online banking, mobile apps, digital payments, and financial planning tools have made it easier for people to access financial services from anywhere, at any time. This digital transformation has increased convenience, improved customer experience, and opened up financial opportunities for more people, even in remote areas. At the same time, the industry continues to face challenges such as cybersecurity risks, changing regulations, and economic uncertainties. To stay competitive and trustworthy, financial institutions must constantly adapt, innovate, and focus on customer needs. Overall, the financial services industry is not just about handling money—it is about building trust, creating opportunities, and supporting the financial well-being of society as a whole.

3.1.2 Present and future Scenario of the Financial Services Industry

As of 2024, the financial services sector is undergoing significant changes, largely due to technology. More people are using digital tools for banking and investing, such as mobile apps, online payment systems, and robo-advisors. This has led to the rise of fintech companies, which use technology to improve financial services. These companies offer faster, more convenient, and often cheaper solutions compared to traditional banks. As a result, financial services have become more accessible to a larger population, even in remote areas.

Despite the benefits of technology, the industry faces challenges. Issues like increased fraud and cybersecurity threats have emerged as more services go online. Hackers and cybercriminals often target financial data, so companies must invest in strong security systems. Additionally, economic factors such as fluctuating interest rates, inflation, and global uncertainty have added pressure on financial institutions. These changes require companies to adapt quickly to remain competitive and meet customer expectations.

Future of the Financial Services Industry

The financial services industry is expected to focus on innovation and improving customer experiences. Some key trends include:

1. **Use of Artificial Intelligence (AI):** Financial firms are adopting AI to analyze large amounts of data quickly and accurately. AI helps in making better decisions, predicting customer needs, detecting fraud, and offering personalized financial advice. This not only saves time but also improves the overall quality of services.
2. **Sustainability Focus:** There's a growing emphasis on environmentally friendly practices in finance. More banks and investment firms are supporting green projects, such as renewable energy and sustainable farming. They are also offering "green bonds" and ethical investment options. This shift is happening because customers now prefer to invest their money with companies that care about the planet and future generations.

3. **Regulatory Changes:** Ongoing adjustments in laws will impact how financial firms operate. Governments and regulators are working to update financial rules to match new technologies and changing economic conditions. These changes aim to ensure customer safety, prevent misuse of technology, and maintain stability in the financial system.
4. **Blockchain and Digital Currencies:** Blockchain technology is gaining popularity in the financial world for its transparency and security. Many financial institutions are exploring its use for secure transactions, smart contracts, and digital currencies like cryptocurrencies. In the future, we may see more use of digital currencies, both private and government-backed (like Central Bank Digital Currencies or CBDCs), changing how people store and exchange money.
5. **Greater Personalization and Customer-Centric Services:** Financial services are moving toward highly personalized offerings using data analytics and customer behavior tracking. Services will be tailored to individual needs—whether it's saving plans, loan options, or investment advice. This customer-centric approach aims to build stronger relationships, increase loyalty, and improve user satisfaction.

3.1.3 PESTEL Analysis of the Financial Services Industry

A PESTEL analysis helps us understand the external factors affecting the financial services industry. Here's a simple breakdown:

1. **Political**: Government actions and policies play a major role in shaping the financial sector. Political stability, taxation policies, trade agreements, and especially regulations from central banks and financial watchdogs directly impact how banks, insurance firms, and investment companies operate. For example, stricter anti-money laundering laws may increase compliance costs but ensure better transparency. Political decisions on interest rates, subsidies, or digital currency laws can also influence growth in this sector.

2. **Economic:** The financial industry is closely tied to the overall economy. Factors like GDP growth, inflation, unemployment, and interest rates influence consumer behavior and the demand for financial services. For instance, during economic booms, people are more likely to invest and borrow, while during downturns, there's a tendency to save more and avoid risk. Currency exchange rates and global economic trends also impact multinational financial institutions.
3. **Social:** Social trends and changing consumer expectations are reshaping the financial services landscape. People now prefer digital banking, instant services, and personalized financial advice. There's a growing interest in financial inclusion, where more individuals—especially from rural or underserved areas—are being brought into the formal financial system. Additionally, younger generations prioritize ethical investing and want their banks to support social and environmental causes.
4. **Technological**: Technology is transforming every part of the financial services industry. Innovations like mobile apps, online banking, AI-powered chatbots, digital wallets, and blockchain technology are now common. These advancements increase efficiency, reduce operational costs, and enhance customer experience. Fintech companies are pushing traditional banks to innovate or risk falling behind. Cybersecurity and data protection have also become major concerns as more services move online.
5. **Environmental:** With the growing awareness of climate change, there is a shift toward green finance. Financial institutions are offering eco-friendly investment options and encouraging projects that promote sustainability. Environmental, Social, and Governance (ESG) criteria are now commonly used to evaluate where money should be invested. Companies that fail to address their environmental responsibilities may lose customers or face public criticism.
6. **Legal**: With the growing awareness of climate change, there is a shift toward green finance. Financial institutions are offering eco-friendly investment options and encouraging projects that promote sustainability. Environmental, Social, and Governance (ESG) criteria are now commonly used to evaluate where money should be invested. Companies that fail to address their environmental responsibilities may lose customers or face public criticism.

3.2 COMPANY INTRODUCTION

3.2.1 History of company

4R Investments is a financial advisory firm based in Hyderabad, incorporated in 2010 with the aim of helping individuals and businesses meet their financial goals. With a strong understanding of diverse financial needs, they have built a reputation for providing personalized financial services. Over the years, the company has developed a client-focused approach, where their primary goal is to minimize risk and optimize returns for clients through careful and strategic investment planning. The firm’s expertise lies in making the investment process smoother and more transparent, ensuring that their clients feel secure and informed about their financial decisions.

The 4R's Explained

1. Return on Investments (ROI)

This refers to the value that money can bring to an investor over time. Understanding ROI is crucial because it helps determine how effectively investments are generating profits. By focusing on achieving better returns on investments, the goal is to align financial strategies with personal financial goals. Clear guidance on investment choices can help maximize these returns.

2. Readiness

Readiness in investing means being prepared to make smart investment choices at the right moments. Even small investments can yield significant returns if made at the appropriate times. This involves monitoring market trends and identifying the right opportunities to invest in stocks. The aim is to ensure that investments are timely and strategic, increasing the likelihood of better returns.

3. Reduce Risk

Risk is an inherent part of investing, and while it can't be entirely eliminated, it can be minimized. Reducing risk involves closely observing stock performance and market dynamics. By making informed, data-driven decisions, it's possible to lower the potential for loss while still pursuing profitable opportunities. This proactive approach helps investors navigate market volatility more safely.

4. Reliability

Investing is not just about short-term gains; it's about achieving consistent and dependable returns. Reliability in investing means focusing on stable returns while minimizing risks. With a solid understanding of various investment vehicles like stocks, mutual funds, and other financial assets, the aim is to ensure that investors can trust the outcomes of their investments over time.

3.2.2 Mission, Vision and Core Values.

VISION:

4R Investments strives to become a dependable provider of financial solutions, ensuring results while reducing risks for its clients. The company also aims to promote financial awareness, helping customers make informed investment decisions.

MISSION:

4R Investments is committed to helping clients grow their investments, guided by values like fairness, transparency, expertise, and high-quality service.

CORE VALUE:

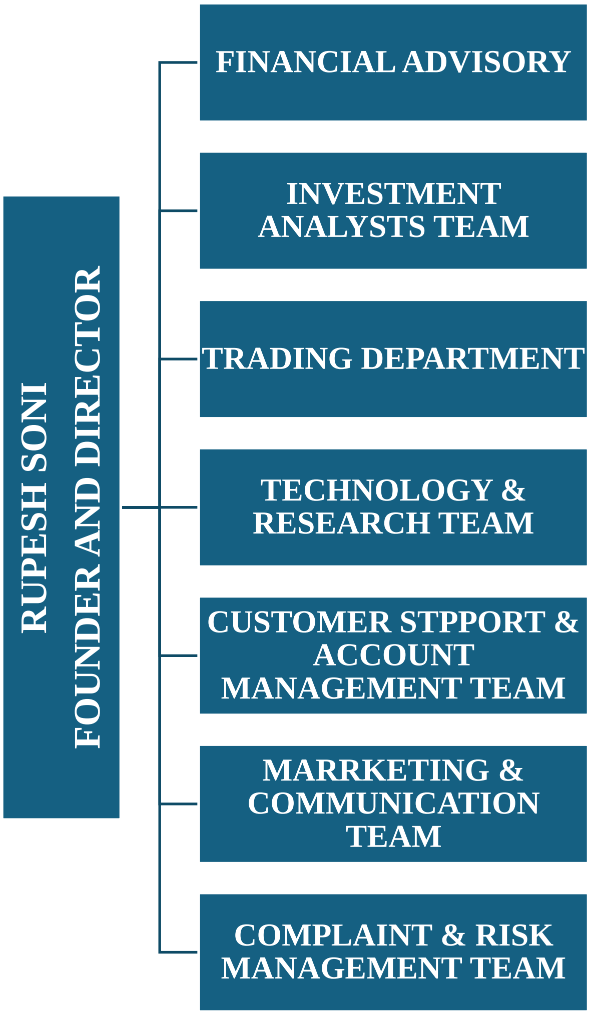
As they help people grow their funds and investments, they stick to morals like fairness, transparency, expertise, and quality service standards.

3.2.3 Organization structure

4R Investments is structured to ensure strategic leadership, operational efficiency, and client-focused services. At the top is Founder and Director Rupesh Soni, who provides visionary leadership and oversees the company’s strategic planning and growth initiatives. The Financial Advisory Team works closely with clients to offer personalized investment solutions based on their goals, risk appetite, and financial situation. Supporting this, the Investment Analysts conduct in-depth market research and evaluate various asset classes to identify profitable and sustainable investment opportunities. The Trading Department is responsible for executing stock, commodity, and derivative transactions swiftly and accurately, helping clients take advantage of market movements. Enhancing this process, the Technology & Research Team uses advanced tools and AI-driven insights to support smarter investment decisions and improve operational efficiency. The Customer Support Team ensures strong client relationships by addressing queries and maintaining satisfaction through timely assistance. The Marketing & Communications Team promotes the company’s services and strengthens its market presence through branding, outreach, and digital engagement. Finally, the Compliance & Risk Management Team plays a vital role in ensuring all regulatory guidelines are followed and potential financial or operational risks are identified and minimized, enabling 4R Investments to maintain trust and deliver high-quality, secure financial services.

This well-defined structure enables 4R Investments to function cohesively, where each department plays a key role in driving the company’s mission forward. With seamless collaboration and a shared focus on client success, the organization achieves excellence through innovation, integrity, and informed decision-making.

Overall, the company's structure supports both its short-term operations and long-term strategic goals. By empowering its teams and investing in technology and research, 4R Investments remains agile in a dynamic market environment. This approach helps maintain strong client relationships, regulatory compliance, and a competitive edge in the financial services industry.



Organization structure of 4R Investments

3.2.4 Products and Services

Products Offered by 4R Investments

4R Investments provides a comprehensive suite of financial products designed to meet the diverse needs of individual and institutional investors. Each product offering is supported by expert advice, research-backed insights, and personalized service to ensure clients make informed and strategic financial decisions.

1. **Equity Trading**: 4R Investments offers robust services in equity trading, enabling clients to buy and sell shares listed on premier Indian stock exchanges such as the National Stock Exchange (NSE) and the Bombay Stock Exchange (BSE). The firm not only facilitates these transactions but also empowers investors with real-time market updates, technical analysis, and performance reports. Whether clients

are beginners or seasoned traders, the advisory team provides personalized guidance to help them make confident and profitable investment choices in the stock market.

2. **Commodity Trading**: To enhance portfolio diversification and provide protection against market volatility and inflation, 4R Investments offers expert support in commodity trading. Clients can invest in a variety of commodities such as agricultural products (like grains and spices), energy resources (like crude oil and natural gas), and precious or industrial metals (like gold, silver, and copper). The firm uses market analytics and global commodity trend monitoring to guide investors in identifying the best opportunities across different commodity classes.
3. **Mutual Funds**: For clients focused on long-term wealth creation, 4R Investments provides professional guidance in selecting and managing mutual fund investments. The firm assists clients in choosing from a broad spectrum of mutual funds, including equity-oriented funds, debt funds, hybrid funds, and tax-saving schemes (like ELSS). With an emphasis on risk profiling, investment horizon, and financial goals, the advisory team helps clients build and maintain a balanced and growth-oriented mutual fund portfolio.
4. **Derivatives**: 4R Investments also specializes in derivatives trading, which includes complex instruments like futures and options based on underlying assets such as stocks, indices, currencies, and commodities. Recognizing that derivatives require a higher level of expertise and risk awareness, the firm provides comprehensive research, risk assessment tools, and tailored strategies. This helps clients take calculated positions, hedge existing investments, or leverage market movements, all while maintaining a focus on risk management and regulatory compliance.

Services Provided by 4R Investments

4R Investments offers several essential services that enhance the investment experience for their clients:

1. **Demat Account Management**: The firm assists clients in opening and efficiently managing Demat accounts, which are essential for holding shares and securities in a digital format. This service eliminates the need for physical certificates and ensures safety, convenience, and accessibility. 4R Investments provides user-

friendly digital platforms with real-time monitoring of holdings, low brokerage charges, and seamless integration with trading accounts, making it easy for clients to manage and track their investments anytime, anywhere.

2. **Trading Account Setup:** 4R Investments guides clients through the process of setting up trading accounts, which are necessary for buying and selling financial instruments like stocks, bonds, commodities, and derivatives. These accounts empower clients to take direct control of their investment decisions without relying on intermediaries. With expert assistance during onboarding, continuous support, and an intuitive interface, the firm ensures a smooth and efficient trading experience for both new and experienced investors.
3. **Intraday Trading**: For clients interested in short-term trading strategies, 4R Investments offers full support for intraday trading, where positions are opened and closed within the same trading day. This high-risk, high-reward approach requires expert guidance, and the firm provides detailed market insights, real-time data, and strategic advice to help clients make the most of rapid market movements. Risk management tools and alerts are also offered to help minimize potential losses and protect profits.
4. **Initial Public Offerings (IPO):** 4R Investments helps clients take advantage of IPOs—opportunities to invest in companies before their shares are listed on the stock market. This early investment often comes with the benefit of buying shares at a discounted or subsidized rate. The firm provides in-depth research on upcoming IPOs, assistance with application procedures, and guidance on evaluating the company's prospects, enabling clients to make informed and potentially profitable decisions.
5. **Portfolio Management Services (PMS)**: Through its PMS offering, 4R Investments provides expert management of client portfolios, which may include equities, mutual funds, bonds, and other financial instruments. Each portfolio is tailored based on the client's financial goals, risk appetite, and investment horizon. The firm's experienced managers use data-driven strategies and continuous market analysis to optimize asset allocation, rebalance portfolios when necessary, and ensure long-term growth and stability of the client's wealth. Regular performance updates and transparent reporting help clients stay informed and confident in their investment journey.

3.2.5 SWOT analysis

Strengths

1. **Diverse Service Offerings**: 4R Investments offers a broad range of financial services, including stock broking, wealth management, and financial advisory. This diversity enables the company to cater to various customer segments—from individual investors to small businesses—thereby ensuring multiple income streams. It also reduces the company's reliance on a single source of revenue, making it more resilient to market fluctuations.

2. Expertise in Stock Broking: The firm's in-depth knowledge of equity markets, trading strategies, and risk management provides it with a solid foundation to guide clients in making informed decisions. This expertise builds credibility and positions 4R as a trusted partner for investors looking for hands-on support in market investments.

3. **Strong Client Relationships**: One of the key strengths of 4R Investments lies in its ability to offer personalized advisory services. Transparent communication, tailored solutions, and a proactive approach to client servicing have helped in building long-term relationships. Satisfied clients often lead to referrals, increasing the company's client base organically.

4. Efficient Technology Infrastructure: The use of advanced trading platforms, algorithm-based systems, and real-time analytics tools allows the company to execute trades quickly and accurately. A solid technology backbone enhances operational efficiency, reduces manual errors, and provides clients with a seamless investment experience.

5. Regulatory Compliance: Maintaining a strong compliance framework ensures that the firm adheres to all legal and regulatory requirements set by authorities like SEBI. This not only minimizes legal risk but also reinforces client trust and confidence in the firm's operations.

Weaknesses

1. **High Dependence on Market Volatility**: Since a significant portion of 4R's revenue comes from trading and market-based activities, any downturn or reduced volatility in the stock market can directly impact earnings. Low trading volumes or prolonged bearish phases could result in decreased profitability.

2. **Limited Brand Recognition**: Compared to larger, well-known financial firms, 4R may struggle to create strong brand awareness, especially among new or retail investors. This can hinder client acquisition and reduce competitiveness in saturated markets.

3. **Capital Constraints**: Being a mid-sized or smaller firm, 4R may have limited financial resources for large-scale expansion, marketing, or technological innovation. This can restrict its ability to compete with bigger players that have access to more capital and can absorb higher costs.

4. **Overhead Costs**: Being a mid-sized or smaller firm, 4R may have limited financial resources for large-scale expansion, marketing, or technological innovation. This can restrict its ability to compete with bigger players that have access to more capital and can absorb higher costs.

5. **Customer Acquisition Costs**: Being a mid-sized or smaller firm, 4R may have limited financial resources for large-scale expansion, marketing, or technological innovation. This can restrict its ability to compete with bigger players that have access to more capital and can absorb higher costs.

Opportunities

1.**Growing Retail Participation**: Being a mid-sized or smaller firm, 4R may have limited financial resources for large-scale expansion, marketing, or technological innovation. This can restrict its ability to compete with bigger players that have access to more capital and can absorb higher costs.

2. Digital Transformation: By adopting AI-powered chatbots, mobile trading apps, robo-advisors, and cloud-based services, 4R can modernize its offerings. These digital upgrades not only enhance customer experience but also reduce costs and improve efficiency.

3. Expansion into New Markets: 4R can explore untapped or niche areas like derivatives trading, mutual fund distribution, portfolio rebalancing services, and alternative investments. This diversification can open up new revenue streams and reduce dependency on traditional broking.

4. Educational Initiatives: Conducting workshops, webinars, and online courses can position 4R as an expert in the field while attracting novice investors. This helps build brand value and creates trust among customers who are looking for guidance before making investment decisions.

5. Strategic Partnerships: Collaborations with banks, fintech companies, and insurance firms can provide access to new customer bases and shared technological resources. Such partnerships can also facilitate cross-selling of financial products, increasing customer lifetime value.

Threats

1. Intense Competition: The financial services space is crowded with major players offering zero-commission trades, attractive platforms, and innovative tools. Competing with these firms can lead to pricing pressure and client attrition if 4R cannot differentiate itself effectively.

2. Regulatory Changes: The industry is tightly regulated, and any sudden changes in compliance requirements, taxation policies, or investment norms can disrupt operations. Compliance costs can also rise, affecting the bottom line of smaller firms like 4R.

3. Market Crashes & Economic Instability: Economic downturns, recessions, or stock market crashes can reduce investor confidence, lower trading activity, and directly impact the firm’s earnings. Prolonged economic instability could even lead to client withdrawals and operational scaling down.

4. Technology Disruption: Rapid advancements in fintech and the rise of discount brokers using cutting-edge technology could make traditional brokers less relevant if not quickly adapted.

5. Cybersecurity Threats: As a financial services company, 4R Investment is vulnerable to cyber-attacks or data breaches, which could result in financial loss, regulatory fines, and reputational damage.

CHAPTER IV

DATA ANALYSIS & INTERPRETATION

4.1 ECONOMIC ANALYSIS

4.1 INTRODUCTION

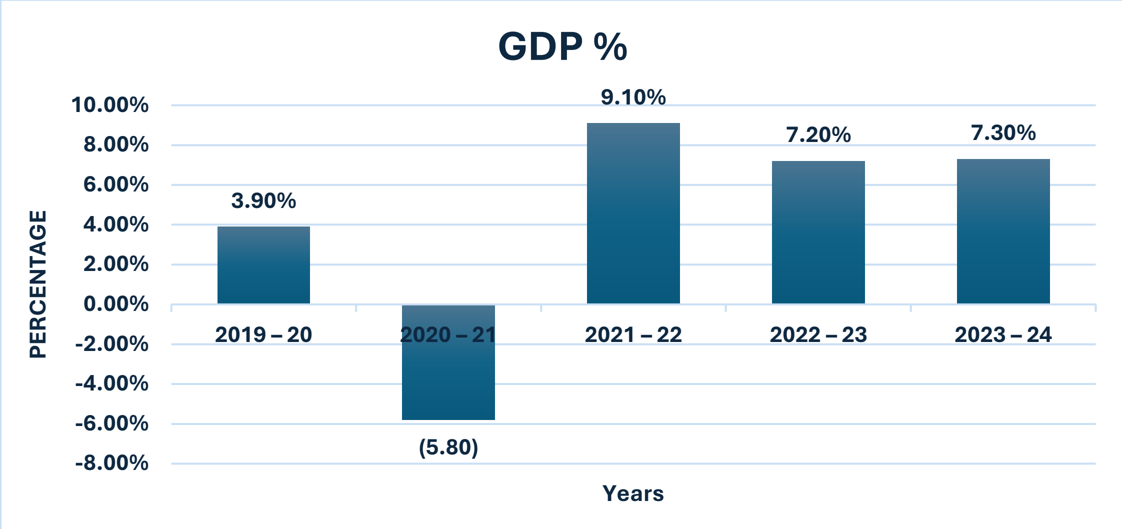
Economic analysis helps to understand the overall condition of a country's economy and how it affects the growth of different industries. while a strong economy creates better opportunities for industries to grow, while a weak economy can slow them down. In this study, economic analysis is done by looking at India's GDP growth, Inflation rate, and Interest rate over the last five years to understand how the country's economic performance and supports the development of the industries, especially the tourism sector.

India's GDP growth rate: The Gross Domestic Product (GDP) growth rate is one of the most important indicators of a country's economic performance. A higher GDP growth rate reflects a strong economy, which positively impacts industries by increasing demand, income levels, and business activities.

Table 4.1.1 India's GDP growth rate from (2019-20 to 2023-24)

Year	**GDP %**
2019 – 20	3.9
2020 – 21	(5.8)
2021 – 22	9.1
2022 – 23	7.2
2023 – 24	7.3

4.1.1.1 Graph Showing India's GDP (%)



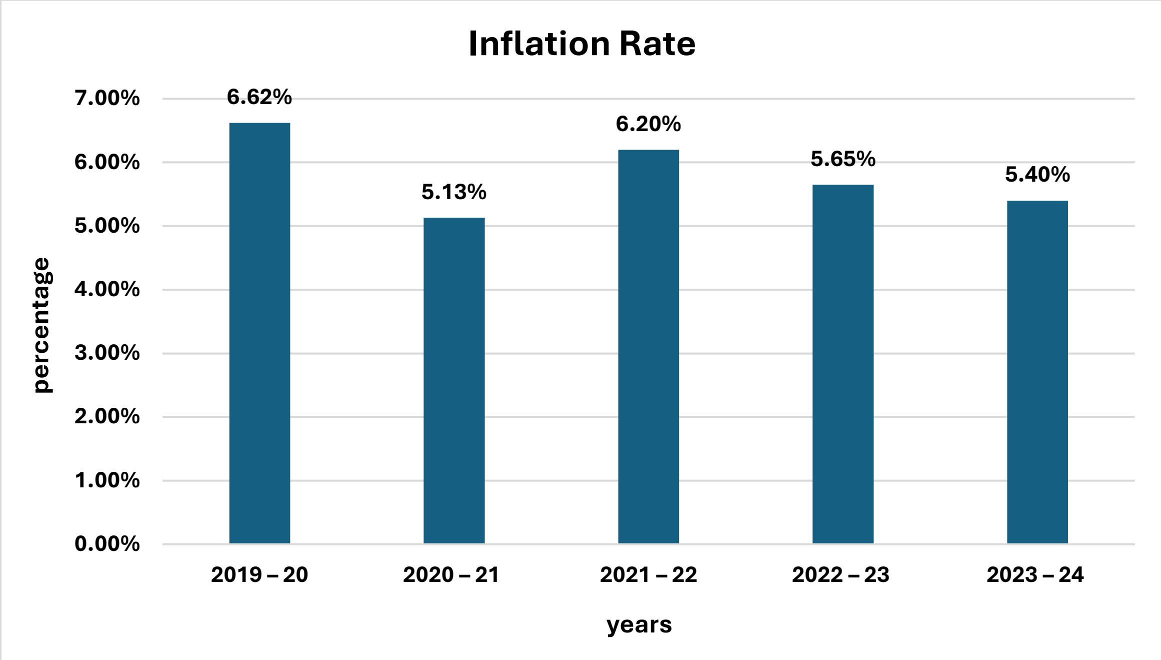
4.1.1.2 Interpretation

From the above table and graph, we can see that the GDP growth rate shows how fast the economy is growing. A higher GDP rate means more business opportunities. Due to COVID-19, the GDP dropped to (5.8)% in 2020-21, but it recovered to 9.1% in 2021-22 and remained stable at 7.3% in 2023-24. This helps us to know that the economy is improving, which is good for businesses and investments.

Table 4.1.2 Inflation Rate (2019-20 to 2023-24)

Year	Inflation Rate
2019 – 20	6.62
2020 – 21	5.13
2021 – 22	6.20
2022 – 23	5.65
2023 – 24	5.4

4.1.2.1 Graph showing India's Inflation rate (2019-20 to 2023-24)



4.1.2.2 Interpretation

From the above table and graph, we can see that inflation rate affects the prices of goods and services. In 2019-20, inflation was 6.62%, then it dropped to 5.13% in 2020-21, and then it increased to 6.20% in 2021-22, later it settled at 5.4% in 2023-24.

4.2 INDUSTRY ANALYSIS

4.2.1 INTRODUCTION

Industry analysis means studying how an industry is working, how much it is growing, and what problems or opportunities it may have in the future. It helps us understand whether an industry is developing, staying stable, or facing a decline. This information is useful to know which industries have good chances of growth and are better for investment.

Industry analysis also helps to understand the demand in the market, the support given by the government, competition in the industry, and other important factors that affect its performance. This makes it easier to take better decisions for business and investment.

In this project, industry analysis is done for three important industries:

- Tourism Industry
- Cement Industry
- Automobile Industry

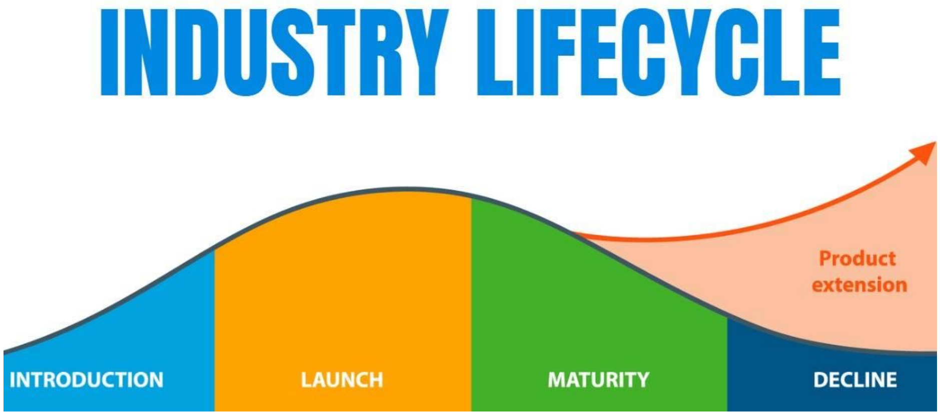
These industries are at different stages of growth and have different opportunities and challenges.

4.2.2 INDUSTRY LIFE CYCLE

Every industry passes through different stages of growth over time, which is known as the Industry Life Cycle. Understanding these stages helps in identifying the current position of an industry, its future potential, and the strategies needed for its growth and survival.

The four main stages of the industry life cycle are:

1. Introduction stage
2. Growth stage
3. Maturity stage
4. Decline stage



In this project report the three industries selected in this study—Tourism, Chemical, and Automobile—are each positioned at different stages of the industry life cycle. Identifying their current stages helps to understand their growth, stability, and future potential.

4.2.3 LIFE CYCLE STAGES OF SELECTED INDUSTRY

Every industry operates at a particular stage of its life cycle based on its demand, growth, competition, and market conditions. In this study, the Tourism, Cement, and Automobile industries have been analyzed to identify their current stage in the industry life cycle. Knowing the stage of each industry helps in understanding its current performance and future growth potential.

Selected Industry	Current Life Cycle Stage	Explanation
Tourism	Growth stage	High demand after COVID recovery, government promotions, and rising travel interest.
Cement	Maturity stage	Consistent demand from housing and infrastructure but not rapidly growing.
Automobile	Transitional	Traditional vehicles are stable but EVs are creating new growth

4.2.4 COMPARISON OF THE SELECTED THREE INDUSTRY

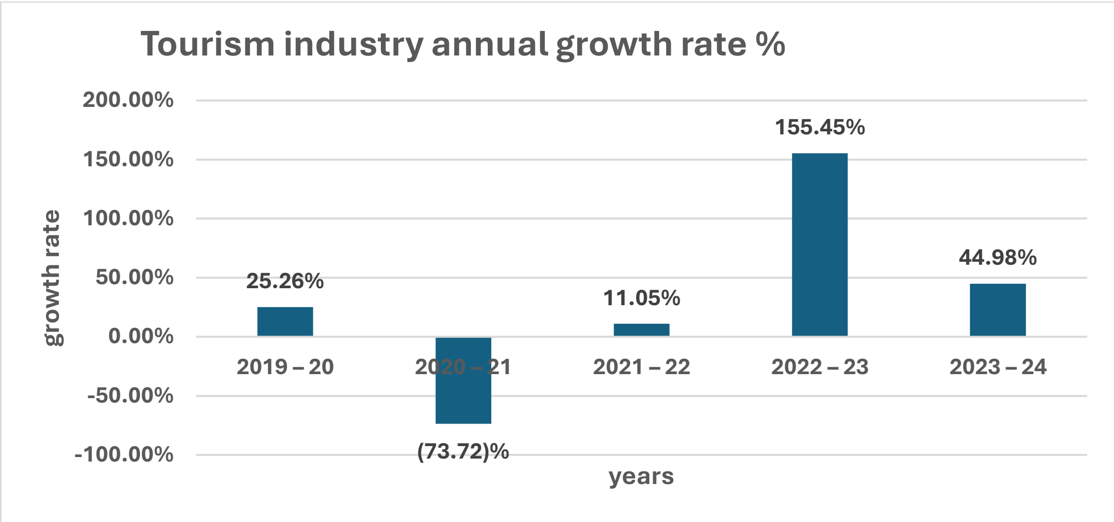
A comparison of the Tourism, Cement, and Automobile industries helps to understand their main growth drivers, government support, challenges faced, and future potential. By comparing these factors, we can analyze the present situation and opportunities in each industry.

Factors	**Tourism Industry**	**Cement Industry**	**Automobile Industry**
Growth Drivers	Increasing domestic and international travel, government campaigns, and rising disposable income.	Demand from infrastructure projects, urbanization, and real estate.	Shift towards electric vehicles (EVs), rising incomes, and urban demand.
Government Support	Tourism promotion schemes, infrastructure development, and digital campaigns.	Smart City Mission, affordable housing projects (PMAY), and highway expansion.	FAME-II scheme, tax benefits, and Make in India initiatives.
Challenges Faced	Seasonal demand, global risks (pandemics, wars).	Rising input costs (coal, power), environmental regulations.	High competition, rapid technology changes, and high production costs.
Future Potential	High, with growing travel demand and digitalization.	Moderate, with steady demand from infrastructure growth.	High, with growing EV market and government focus on clean energy.

Table 4.2.5 Tourism Industry Annual Growth Rate %

Year	Tourism industry annual growth rate %
2019 – 20	25.26
2020 – 21	(73.72)
2021 – 22	11.05
2022 – 23	155.45
2023 – 24	44.98

4.2.5.1 Graph showing Tourism Industry Growth Rate %



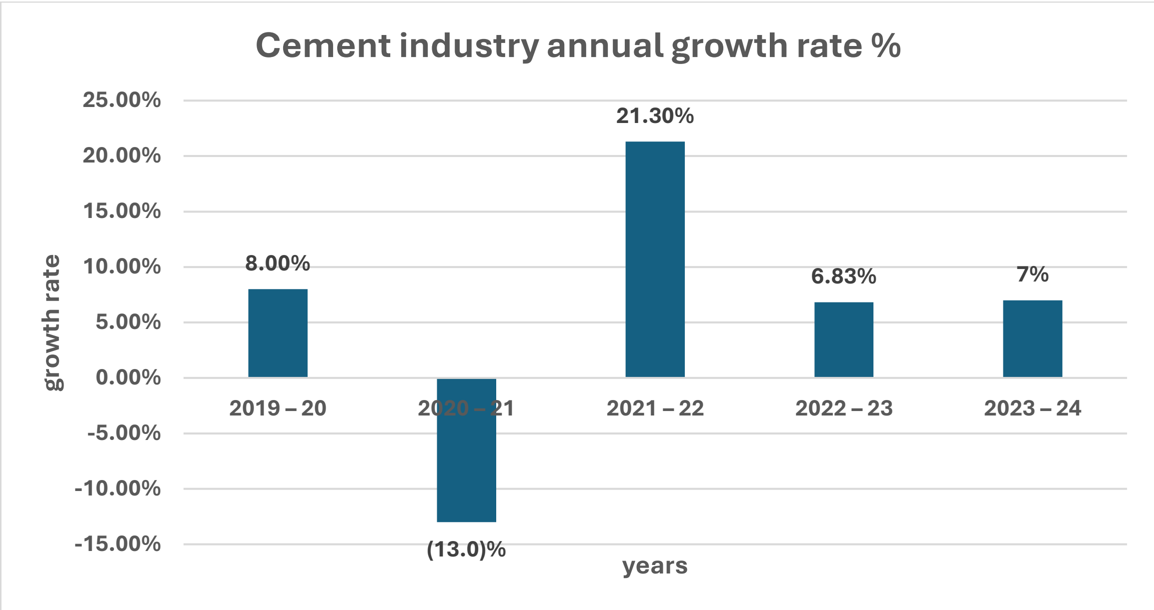
4.2.5.2 Interpretation

From the above table and graph, we can see that the tourism industry was badly affected by COVID-19, falling by (73.72)% in 2020-21. However, it recovered with 155.45% growth in 2022-23 and 44.98% in 2023-24. This shows that tourism is improving as people travel more, and the industry is getting back on track.

Table 4.2.6 Cement Industry Annual Growth Rate%

Year	Cement industry annual growth rate %
2019 – 20	8.0
2020 – 21	(13.0)
2021 – 22	21.3
2022 – 23	6.83
2023 – 24	7

4.2.6.1 Graph Showing Cement Industry Growth Rate%



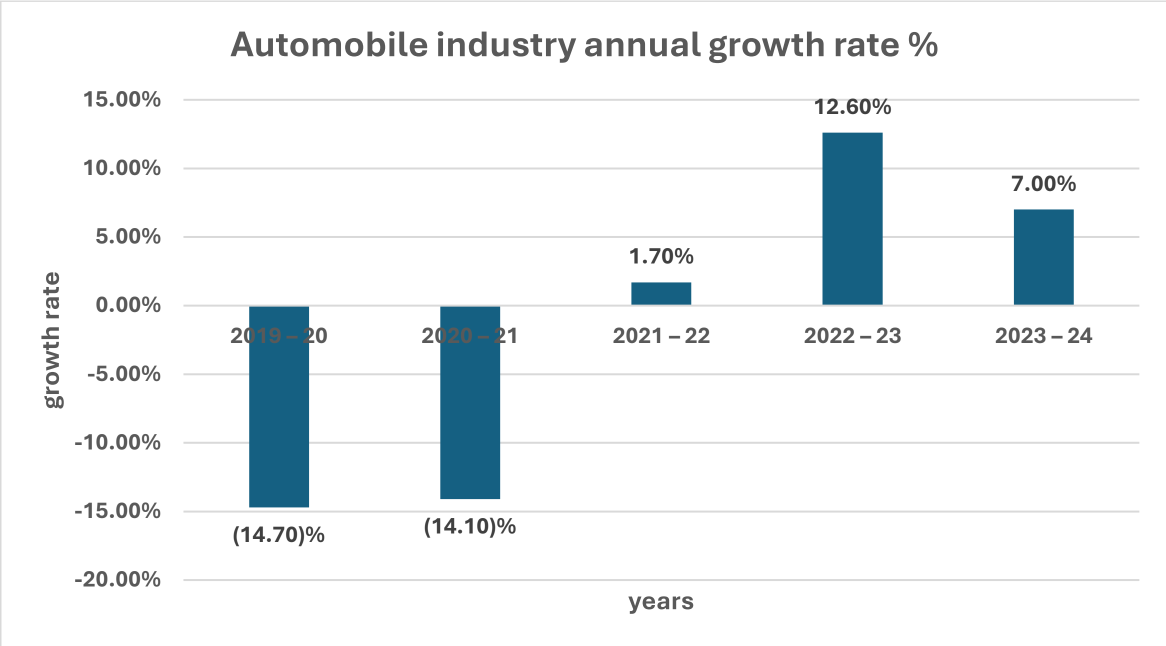
4.2.6.2 Interpretation

From the above table and graph, we can see that the cement industry declined by (13.0)% in 2020-21 due to fewer construction projects. It recovered with 21.3% growth in 2021-22 and later stabilized at 7-8% in 2023-24. This means that the industry is now stable and continues to grow steadily.

Table 4.2.7 Automobile Industry Annual Growth Rate %

Year	Automobile industry annual growth rate %
2019 – 20	(14.7)
2020 – 21	(14.1)
2021 – 22	1.7
2022 – 23	12.6
2023 – 24	7.0

4.2.7.1 Graph Showing Automobile Industry Growth Rate %



4.2.7.2 Interpretation

From the above table and graph, we can see that the automobile industry is struggled in 2019-20 and 2020-21, but it started recovering with 1.7% growth in 2021-22. Growth improved to 12.6% in 2022-23, but later slowed to 7.0% in 2023-24. This suggests that the industry is stabilizing and shifting towards electric vehicles (EVs), which could be its future growth area.

4.3 COMPANY ANALYSIS

1. IRCTC ltd

2. Thomas Cook India

3. Ease Trip Planner ltd

4.3.1 OPERATING PROFIT MARGIN

Operating profit margin = operating profit / revenue *100

Table 4.3.1.1 computation of operating profit margin ratio of IRCTC ltd

Year	Operating profit (A)	Revenue (B)	Operating profit margin (C) (A/B)*100
2019 – 20	713.39	2,275.18	31.33
2020 – 21	190.29	782.96	24.30
2021 – 22	879.50	1,879.14	46.80
2022 – 23	1,276.22	3,540.76	36.04
2023 – 24	1,466.19	4,269.76	34.33

Table 4.3.1.2 computation of operating profit margin ratio of Thomas cook India

Year	Operating profit (A)	Revenue (B)	Operating profit margin (C) (A/B)*100
2019 – 20	9.16	2,092.62	0.43
2020 – 21	(137.81)	153.92	(89.53)
2021 – 22	(149.43)	275.68	(54.20)
2022 – 23	(28.67)	1,322.28	(2.18)
2023 – 24	62.29	1,976.24	3.15

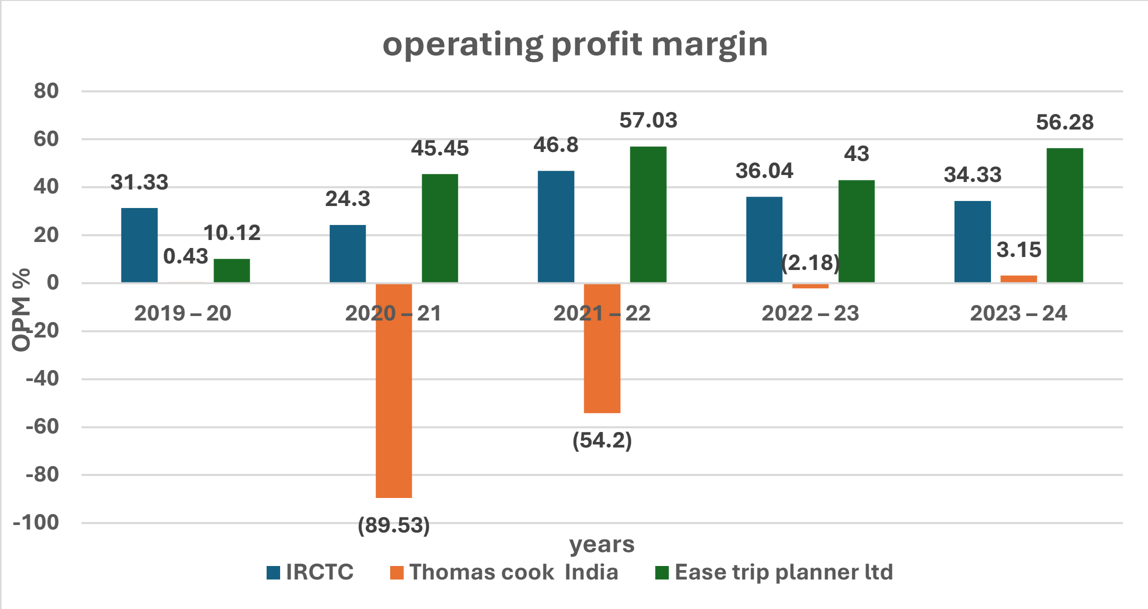
Table 4.3.1.3 computation of operating profit margin ratio of Ease Trip Planners ltd

Year	Operating profit (A)	Revenue (B)	Operating profit margin (C) (A/B)*100
2019 – 20	12.59	124.29	10.12
2020 – 21	44.23	98.09	45.45
2021 – 22	132.82	232.86	57.03
2022 – 23	184.83	429.83	43.00
2023 – 24	219.89	390.68	56.28

Table 4.3.1.4 Operating profit margin

Year	IRCTC ltd	Thomas cook India	Ease trip planner ltd
2019 – 20	31.33	0.43	10.12
2020 – 21	24.30	(89.53)	45.45
2021 – 22	46.80	(54.20)	57.03
2022 – 23	36.04	(2.18)	43.00
2023 – 24	34.33	3.15	56.28

4.3.1.5 Graph showing operating profit margin



4.3.1.6 Interpretation

From the above table and graph, we can see that the operating profit margin shows how much profit a company makes from its main business before interest and taxes. A margin above 15% is considered as a good. IRCTC ltd maintained a strong operating profit margin between 24.30% and 46.80%, showing stable profitability. Ease Trip Planner ltd had an even higher operating profit margin of 57.03%, this indicate excellent business efficiency. However, Thomas Cook India had losses earlier but recovered to 3.15% in 2023-24, which is still below the ideal margin.

4.3.2 RETURN ON ASSETS

Return on asset = net income / total assets * 100

Table 4.3.2.1 Computing of return on asset ratio of IRCTC ltd

Year	Net income (A)	Total assets (B)	ROA % (A/B)*100
2019 – 20	528.57	3,249.84	16.26
2020 – 21	189.90	3,166.04	5.99
2021 – 22	663.69	3,837.18	17.29
2022 – 23	1,005.88	5,088.76	19.76
2023 – 24	1,111.26	6,091.10	18.24

Table 4.3.2.2 Computing of return on asset ratio of Thomas cook India

Year	Net income (A)	Total assets (B)	ROA % (A/B)*100
2019 – 20	(24.91)	2,586.91	(0.96)
2020 – 21	(14.50)	2,758.95	(0.52)
2021 – 22	(82.48)	2,856.94	(2.88)
2022 – 23	1.50	3,414.09	0.04
2023 – 24	99.90	3,855.45	2.59

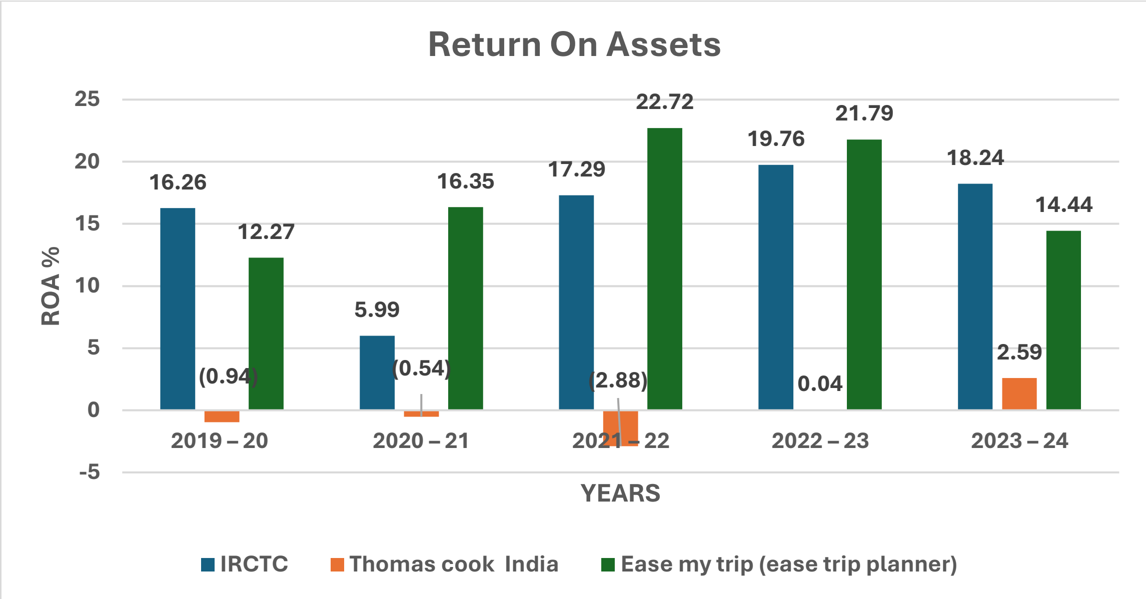
Table 4.3.2.3 Computing of return on asset ratio of Ease Trip Planners ltd

Year	Net income (A)	Total assets (B)	ROA % (A/B)*100
2019 – 20	34.65	282.34	12.27
2020 – 21	62.30	380.94	16.35
2021 – 22	107.20	471.65	22.72
2022 – 23	146.82	673.55	21.79
2023 – 24	119.20	825.09	14.44

Table 4.3.2.4 Return on Asset

Year	IRCTC	Thomas cook India	Ease trip planner
2019 – 20	16.26	(0.96)	12.27
2020 – 21	5.99	(0.52)	16.35
2021 – 22	17.29	(2.88)	22.72
2022 – 23	19.76	0.04	21.79
2023 – 24	18.24	2.59	14.44

4.3.2.5 Graph showing Return on Asset



4.3.2.6 Interpretation

From the above table and graph, we can see that Return on Assets (ROA) measures how efficiently a company uses its assets to generate profit. A ROA above 5% is considered good. IRCTC had a strong ROA, peaking at 19.76%, showing good asset utilization. Ease My Trip performed well, reaching 22.72% at its highest. Thomas Cook had negative ROA in earlier years but improved to 2.59% in 2023-24, which is still below the ideal level.

4.3.3 Return on Capital Employed

EBIT / capital employed * 100

Capital employed = total assets – current liabilities

Table 4.3.3.1 computing of return on capital employed of IRCTC ltd

Year	EBIT (A)	Total assets (B)	Current liabilities (C)	Capital employed (B-C) (D)	Return on capital employed (A/D)*100
2019 – 20	751.51	3,249.84	1,786.29	1,463.55	51.34
2020 – 21	229.64	3,166.04	1,537.78	1,628.26	14.10
2021 – 22	904.57	3,837.18	1,784.63	2,052.55	44.07
2022 – 23	1.342.92	5,088.76	2,391.37	2,697.39	49.78
2023 – 24	1,573.45	6,091.10	2,631.43	3,459.67	45.47

Table 4.3.3.2 computing of return on capital employed of Thomas cook India

Year	EBIT (A)	Total assets (B)	Current liabilities (C)	Capital employed (B-C) (D)	Return on capital employed (A/D)*100
2019 – 20	43.65	2,586.91	1,080.21	1,506.70	2.89
2020 – 21	(35.12)	2,758.95	811.48	1,947.47	(1.80)
2021 – 22	(99.44)	2,856.94	990.77	1,866.17	(5.32)
2022 – 23	60.05	3,414.09	1,533.17	1,880.92	3.19
2023 – 24	190.57	3,855.45	1,904.41	1,951.04	9.76

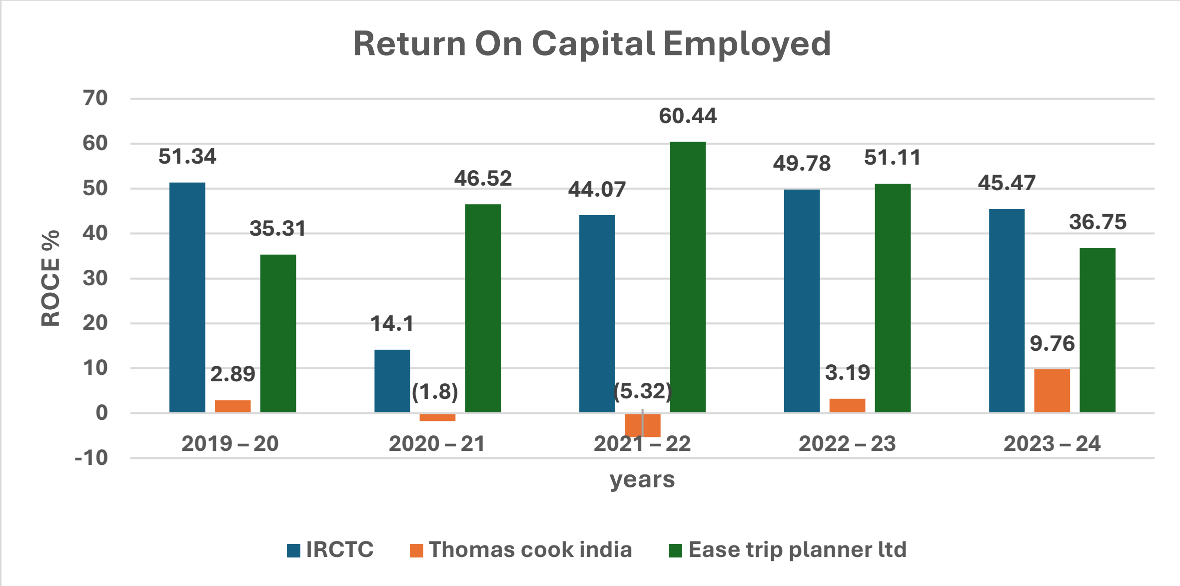
Table 4.3.3.3 computing of return on capital employed of ease trip planner ltd

Year	EBIT (A)	Total assets (B)	Current liabilities (C)	Capital employed (B-C) (D)	Return on capital employed (A/D)*100
2019 – 20	50.62	282.34	139.02	143.32	35.31
2020 – 21	87.79	380.94	192.23	188.71	46.52
2021 – 22	146.59	471.65	229.12	242.53	60.44
2022 – 23	199.65	673.55	282.98	390.57	51.11
2023 – 24	236.36	825.09	182.06	643.03	36.75

Table 4.3.3.4 return on capital employed

Year	IRCTC ltd	Thomas cook India	Ease trip planner ltd
2019 – 20	51.34	2.89	35.31
2020 – 21	14.10	(1.80)	46.52
2021 – 22	44.07	(5.32)	60.44
2022 – 23	49.78	3.19	51.11
2023 – 24	45.47	9.76	36.75

4.3.3.5 Graph showing return on capital employed



4.3.3.6 Interpretation

From the above table and graph, we can see that Return on Capital Employed (ROCE) shows how well a company generates profit from its total capital. A ROCE above 15% is considered excellent. IRCTC maintained a strong ROCE, reaching 51.34%, while Ease My Trip had the highest at 60.44% in 2021-22. Thomas Cook had negative ROCE earlier but improved to 9.76% in 2023-24, which is below the ideal level but shows progress.

4.3.4 Earnings Per Share

Earnings per share = net income / outstanding share

Outstanding share = equity share capital / par value

Table 4.3.4.1 Computing of Earnings Per Share of IRCTC

Year	Net profit (A)	Equity share capital (B)	Par value (C)	Outstanding share (D) (B/C)	EPS (E) (A/D)
2019 – 20	528.57	160	10	16	33.03
2020 – 21	189.90	160	10	16	11.86
2021 – 22	663.69	160	10	16	8.29
2022 – 23	1,005.88	160	2	80	12.57
2023 – 24	1,111.26	160	2	80	13.89

Table 4.3.4.2 Computing of Earnings per Share of Thomas cook India

Year	Net profit (A)	Equity share capital (B)	Par value (C)	Outstanding share (D) (B/C)	EPS (E) (A/D)
2019 – 20	(24.91)	37.83	1.00	37.83	(0.65)
2020 – 21	(14.50)	37.83	1.00	37.83	(0.38)
2021 – 22	(82.48)	44.23	1.00	44.23	(1.86)
2022 – 23	1.50	47.04	1.00	47.04	0.03
2023 – 24	99.90	47.04	1.00	47.04	2.12

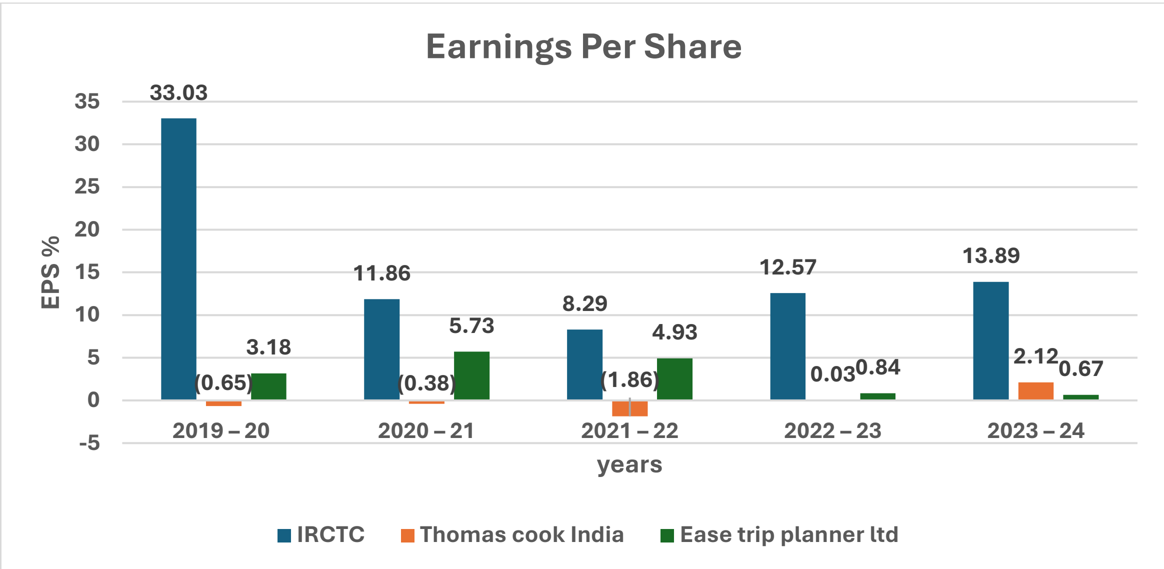
Table 4.3.4.3 Computing of Earnings per Share of ease trip planner ltd

Year	Net profit (A)	Equity share capital (B)	Par value (C)	Outstanding share (D) (B/C)	EPS (E) (A/D)
2019 – 20	34.65	21.73	2.00	10.86	3.18
2020 – 21	62.30	21.73	2.00	10.86	5.73
2021 – 22	107.20	43.46	2.00	21.73	4.93
2022 – 23	146.82	173.83	1.00	173.83	0.84
2023 – 24	119.20	177.20	1.00	177.2	0.67

Table 4.3.4.4 Earnings Per Share

Year	IRCTC	Thomas cook India	Ease trip planner ltd
2019 – 20	33.03	(0.65)	3.18
2020 – 21	11.86	(0.38)	5.73
2021 – 22	8.29	(1.86)	4.93
2022 – 23	12.57	0.03	0.84
2023 – 24	13.89	2.12	0.67

4.3.4.5 Graph showing Earnings Per Share



4.3.4.6 Interpretation

From the above table and graph, we can see that Earnings Per Share shows that how much profit is earned per share. A higher EPS is better for investors. IRCTC ltd had consistent earnings, reaching rs.33.03 in 2019-20. But after a stock split, it adjusted to rs.13.89 in 2023-24. Ease Trip Planner ltd had an EPS of rs.5.73 in 2020-21 but dropped to rs.0.67 in 2023-24, showing inconsistency. Thomas Cook India had negative EPS earlier but improved to rs.2.12 in 2023-24, showing slow recovery.

4.3.5 Asset Turnover Ratio

Asset turnover ratio = revenue / average total asset

Table 4.3.5.1 computing of asset turnover ratio of IRCTC ltd

Year	Revenue (A)	Average turnover ratio= total assets (current year) + (previous year) / 2	Average total assets (B)	Asset turnover ratio (A/B)
2019 – 20	2,353.54	3,249.84 + 2,594.24 / 2	2,922.04	0.80
2020 – 21	868.69	3,166.04 + 3,249.84 / 2	3,207.94	0.27
2021 – 22	1,952.30	3,837.18 + 3,166.04 / 2	3,501.61	0.54
2022 – 23	3,661.90	5,088.76 + 3,837.18 / 2	4,462.97	0.82
2023 – 24	4,434.66	6,091.10 + 5,088.76 / 2	5,589.93	0.79

Table 4.3.5.2 Computing of Asset turnover ratio of Thomas cook India

Year	Revenue (A)	Average turnover ratio= total assets (current year) + (previous year) / 2	Average total assets (B)	Asset turnover ratio (A/B)
2019 – 20	2,190.54	2,586.91 + 2,858.88 / 2	2,722.89	0.80
2020 – 21	318.62	2,758.95 + 2,586.91 / 2	2,672.93	0.11
2021 – 22	359.88	2,856.94 + 2,758.95 / 2	2,807.94	0.12
2022 – 23	1,475.93	3,414.09 + 2,856.94 / 2	3,135.51	0.47
2023 – 24	2,143.47	3,855.45 + 3,414.09 / 2	3,634.77	0.58

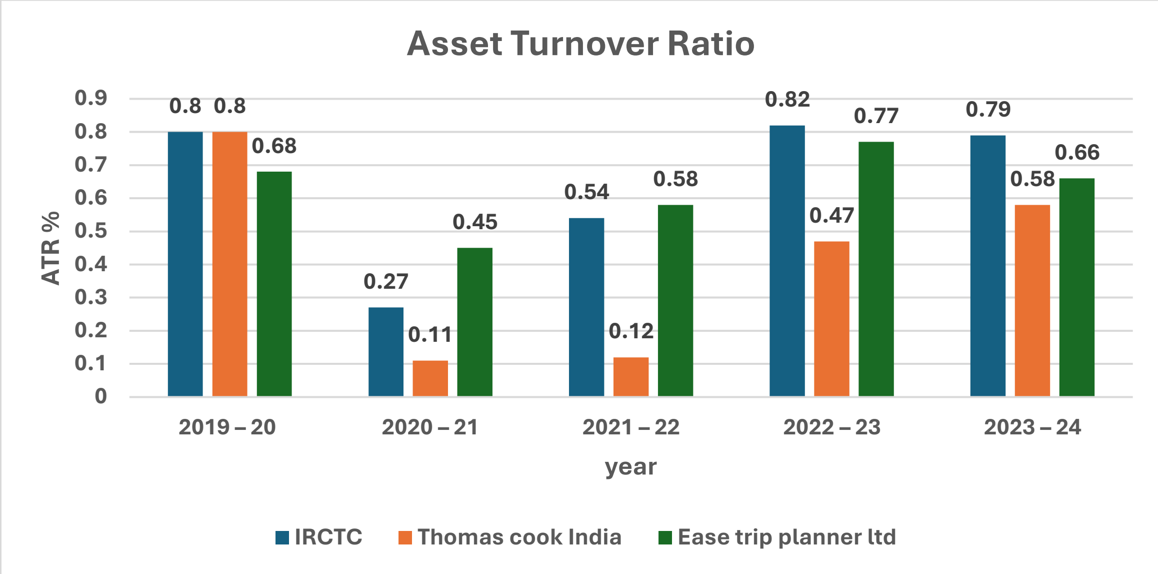
Table 4.3.5.3 Computing of Asset turnover ratio of ease trip planner ltd

Year	Revenue (A)	Average turnover ratio= total assets (current year) + (previous year) / 2	Average total assets (B)	Asset turnover ratio (A/B)
2019 – 20	179.72	282.34 + 243.09 / 2	262.71	0.68
2020 – 21	150.92	380.94 + 282.34 / 2	331.64	0.45
2021 – 22	247.51	471.65 + 380.94 / 2	426.29	0.58
2022 – 23	445.79	673.55 + 471.65 / 2	572.6	0.77
2023 – 24	499.52	825.09 + 673.55 / 2	749.32	0.66

Table 4.3.5.4 Asset Turnover Ratio

Year	IRCTC ltd	Thomas cook India	Ease trip planner ltd
2019 – 20	0.80	0.80	0.68
2020 – 21	0.27	0.11	0.45
2021 – 22	0.54	0.12	0.58
2022 – 23	0.82	0.47	0.77
2023 – 24	0.79	0.58	0.66

4.3.5.5 Graph showing asset turnover ratio



4.3.5.6 Interpretation

From the above table and graph, we can see that Asset Turnover Ratio measures how well a company uses its assets to generate revenue. A ratio above 1 is considered efficient. IRCTC had a decent ratio, peaking at 0.82, while Ease My Trip had its highest at 0.77 in 2022-23, indicating good efficiency. Thomas Cook started with a low ratio of 0.11 in 2020-21 but improved to 0.58 in 2023-24, showing better asset utilization but still below the ideal level.

4.3.6 Interest Coverage Ratio

Interest coverage ratio = EBIT / interest expenses

EBIT = profit before tax + interest

Table 4.3.6.1 Computation of Interest coverage ratio of IRCTC ltd

Year	Profit Before Tax (A)	Interest (B)	EBIT (A+B) (C)	Interest expenses (D)	Interest coverage ratio (C/D)
2019 – 20	744.24	7.27	751.51	7.27	103.32
2020 – 21	221.49	8.15	229.64	8.15	28.18
2021 – 22	893.52	11.05	904.57	11.05	81.86

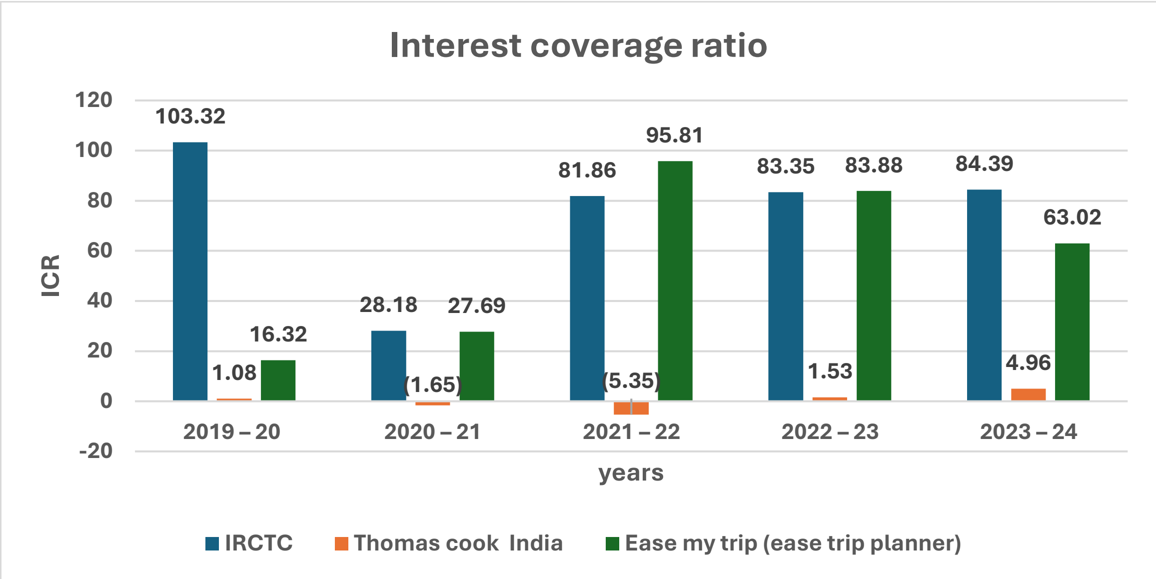
2023 – 24	84.39	4.96	63.02

4.3.6.5 Graph showing Interest coverage ratio



4.3.6.6 Interpretation

From the above table and graph, we can see that Interest Coverage Ratio (ICR) shows how easily a company can pay its interest expenses. A ratio above 3 is ideal. IRCTC had very high ICR, exceeding 28.18, meaning it can easily handle its interest payments. Ease My Trip had an ICR of 95.81 in 2021-22, showing strong financial health. Thomas Cook had negative ICR earlier but improved to 4.96 in 2023-24, reaching a safe level.

4.3.7 Debt-to-Equity ratio

Debt-to-equity ratio = total debt / shareholders' equity

Shareholders equity = total assets – total liabilities

Table 4.3.7.1 Computation of Debt-to-Equity ratio of IRCTC ltd

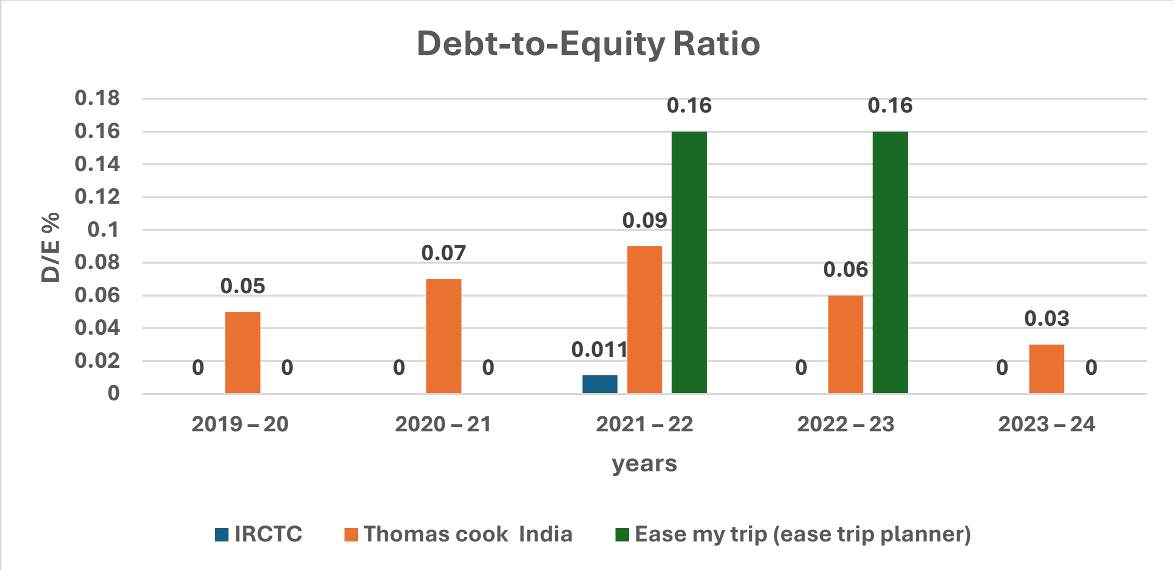
2023 – 24	0	0.03	0

4.3.7.5 Graph showing Debt-to-equity ratio



4.3.7.6 Interpretation

From the above table and graph, we can see that Debt-to-Equity Ratio shows how much debt a company has compared to its own funds. A ratio below 1 is considered good. IRCTC had zero debt in all years, making it the safest investment. Ease My Trip had low debt, peaking at 0.16 but returning to 0 in 2023-24, meaning minimal financial risk. Thomas Cook maintained a low ratio between 0.03 and 0.09, keeping its debt under control.

4.3.8 Price to Earnings Ratio

Price-to-earnings = Stock price / earnings per share

Table 4.3.8.1 Computation of price to earning ratio of IRCTC ltd

Year	Stock price per share (end of the year) (A)	EPS (B)	Price to earnings ratio (A/B)
2019 – 20	982.55	33.03	21.74

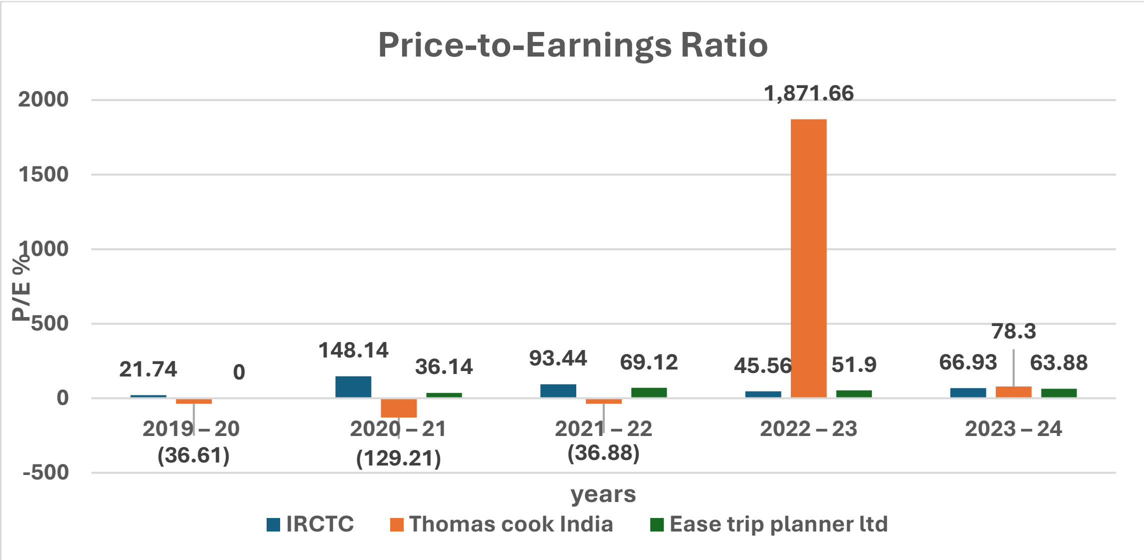
2023 – 24	66.93	78.30	63.88

4.3.8.5 Graph showing price to earnings ratio



4.3.8.6 Interpretation

From the above table and graph, we can see that Price-to-Earnings (P/E) Ratio shows how much investors are willing to pay for each rupee of a company's earnings. A P/E between 15 and 30 is considered good. Here IRCTC had high P/E ratios, ranging from 21.74 to 148.14, showing strong investor demand. Ease Trip Planner ltd had a P/E ratio peaking at 69.12, while Thomas Cook had negative P/E earlier but improved to 78.30 in 2023-24, showing growing investor confidence.

4.3.9 Price To Book ratio

Price-to-book ratio = market price per share / book value per share

Book value per share = shareholders equity / outstanding share

Table 4.3.9.1 computation of price to book ratio of IRCTC ltd

Year	Market price per share (end of the year) (A)	Shareholders equity (A)	Outstanding share (c)	Book value per share (D) (B/C)	Price to book ratio (A/D)

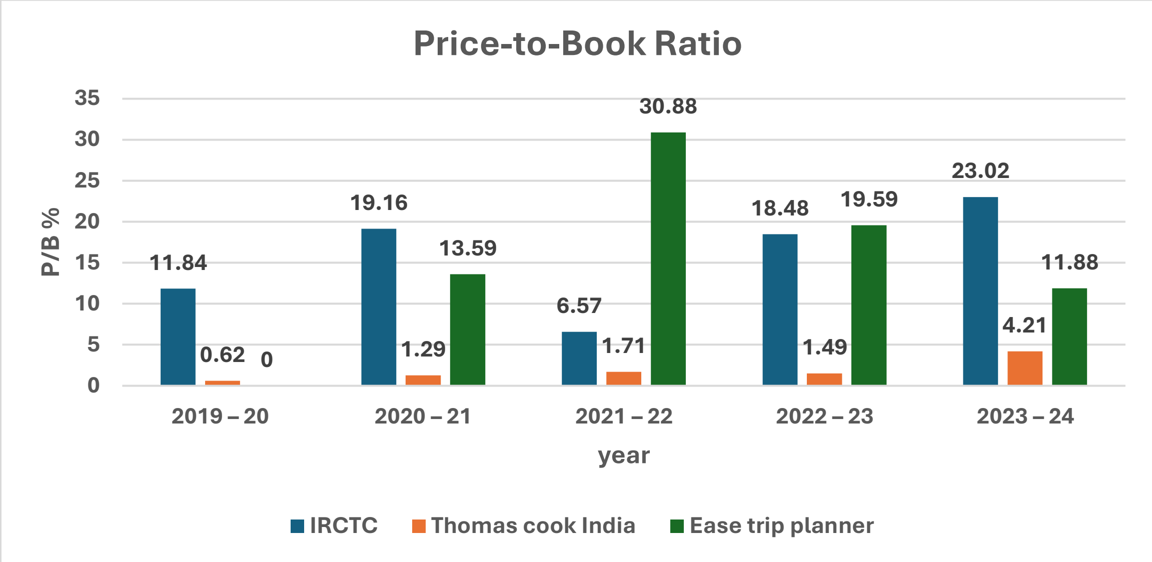
2023 – 24	23.02	4.21	11.88

4.3.9.5 Graph showing price to book ratio



4.3.9.6 Interpretation

From the above table and graph, we can see that the Price-to-Book ratio shows that how much investors are paying compared to the actual value of the company's share. A p/b between 1 and 3 is good. IRCTC ltd had a high P/B ratio of 23.02, showing strong investor trust. Ease Trip Planner ltd highest at 30.88 but later dropped to 11.88 in 2023-24, needs stability. Thomas Cook India had a lower P/B ratio but improved to 4.21 in 2023-24, showing gradual market confidence.

CHAPTER V

FINDINGS, SUGGESTIONS & CONCLUSION

5.1 FINDINGS

1. India's GDP growth rate dropped to (5.8%) in 2020-21. This is due to COVID-19 pandemic but it also recovered to 7.3% in 2023-24. This creates a stable economic environment. Inflation reduced from 6.62% in 2019-20 to 5.4% in 2023-24, helping control the cost of goods and services.

2. The Tourism Industry declines to (73.72%) in 2020-21 due to travel restrictions but it recovered strongly, with 155.45% growth in 2022-23 and 44.98% in 2023-24. This shows steady demand.

3. The Cement Industry dropped by (13.00%) in 2020-2, but stabled at 7% growth in 2023-24. This indicates the consistent demand for real estate and infrastructure projects.

4. The Automobile industry faced challenges but recovered, growing from 1.7% in 2021-22 to 12.6% in 2022-23, before settling at 7.0% in 2023-24 as the sector moves toward electric vehicles.

5. IRCTC ltd maintained a strong operating profit margin between 24.30% and 46.80%, showing steady earnings. Ease Trip Planner ltd had the highest margin at 57.03%, proving its efficiency, while Thomas Cook India slowly recovered, improving its margin to 3.15% in 2023-24.

6. Ease Trip Planner ltd had the best return on assets at 22.72% in 2021-22, while IRCTC ltd peaked at 19.76% in 2022-23. Thomas Cook India, which had negative return on assets earlier, improved to 2.59% in 2023-24.

7. Return on Capital Employed was high for IRCTC ltd 51.34% and Ease Trip Planner ltd 60.44% in 2021-22, while Thomas Cook India, after earlier losses, improved 9.76% in 2023-24.

8. Earnings Per Share for IRCTC ltd was stable, reaching Rs.33.03 in 2019-20 nut adjusting to Rs.13.89 in 2023-24 after a stock split. Ease Trip Planner ltd EPS fell from Rs.5.73 in 2020-21 to Rs.0.67 in 2023-24, showing inconsistency, while Thomas Cook India recovered from negative EPS to Rs.2.12 in 2023-24.

9. Asset Turnover Ratio, which measures efficiency, peaked at 0.82 for IRCTC ltd and 0.77 for Ease Trip Planner ltd in 2022-23. Thomas Cook India improved from 0.11 in 2020-21 to 0.58 in 2023-24 but still lags behind.

10. Interest Coverage Ratio, which shows a company's ability to pay interest, was very strong for IRCTC ltd 28.18% and impressive for Ease Trip Planner ltd 95.81 in 2021-22. Thomas Cook India, after struggling reached a safe level of 4.96 in 2023-24.

11. IRCTC ltd has remained debt-free, making it the safest investment choice. Eaes Trip Planner ltd also maintained low debts, with a temporary 0.16 debt-to-equity ratio, which later returned to 0 in 2023-24. Thomas Cook India controlled its debt well, maintaining a ratio between 0.03 and 0.09.

12. Investors confidence in IRCTC ltd remained strong, as seen in its P/E ratio, which ranged from 21.74 to 148.14. Ease Trip Planner ltd had a peak P/E of 69.12 in 2021-22, while Thomas Cook India recovered to 78.30 in 2023-24 after negative P/E earlier.

13. The Price-to-Book ratio, which shows investor valuation, remained high for IRCTC ltd at 23.02. Ease Trip Planner ltd P/B ratio peaked at 30.88 in 2021-22 but later fell to 11.88 in 2023-24, needing stability. Thomas Cook India had a lower P/B ratio but improved to 4.21 in 2023-24, showing growing market confidence.

14. IRCTC ltd is the best investment option due to its strong profitability, zero debt, and stable financials.

15. Ease Trip Planner ltd is a good option for high returns, but its inconsistent performance poses some risk.

16. Thomas Cook India is still recovering, and while improving, it is not yet a stable investment choice.

5.2 SUGGESTIONS

1. IRCTC ltd is the best investment options among the three companies due to its high profitability, stabled ROCE, zero debts, strong financial position and consistent earnings growth.

2. Ease Trip Planner ltd is also good investment, as it shows good profit margin and return ratio, though it has some fluctuations in earnings.

3. Thomas Cook India is a risky investment, as it had negative returns but its improving gradually.

4. Overall IRCTC ltd is the best company to invest when compared to the Ease Trip Planner ltd and Thomas Cook India.

5.3 CONCLUSION

The fundamental analysis of IRCTC ltd, Ease Trip Planner ltd, and Thomas Cook highlights key differences in their financial performance. IRCTC ltd emerges as the best investment option due to its strong profitability, zero debt, and financial stability, making it a low risk choice for long-term investors. Ease Trip Planner ltd has shown high growth potential with strong profit margins, but its earnings have been inconsistent, requiring better financial stability to remain a strong competitor. Thomas Cook India, after facing significant losses, is showing signs of recovery, but it still lacks the stability needed for a secure investment. While IRCTC ltd is the safest and most stable investment, Ease Trip Planner ltd is suitable for investors willing to take some risk, and Thomas Cook India should be monitored for further improvements before considering investment.

5.4 LIMITATIONS

1. The study covers the data for last five years, from 2019-20 to 2023-24.

2. The study is based on secondary data taken from annual reports and online sources, which may change over time.

3. The study focuses only on three company that is IRCTC ltd, Ease Trip Planner ltd, and Thomas Cook India, which belongs to Tourism industry so the result may not apply to other companies.

4. The study mainly considers the financial data, while customer satisfaction and business strategies were not included.
